MUSKEGON RIVER WATERSHED ASSESSMENT APPENDIX

Richard P. O'Neal

The Michigan Department of Natural Resources, (MDNR) provides equal opportunities for employment and for access to Michigan's natural resources. State and Federal laws prohibit discrimination on the basis of race, color, sex, national origin, religion, disability, age, marital status, height and weight. If you believe that you have been discriminated against in any program, activity or facility, please write the MDNR Equal Opportunity Office, P.O. Box 30028, Lansing, MI 48909, or the Michigan Department of Civil Rights, 1200 6th Avenue, Detroit, MI 48226, or the Office of Human Resources, U.S. Fish and Wildlife Service, Washington D.C. 20204.

For more information about this publication or the American Disabilities Act (ADA), contact, Michigan Department of Natural Resources, Fisheries Division, Box 30446, Lansing, MI 48909, or call 517-373-1280.

Appendix 1 Distribution Maps of Fish Species

This appendix contains maps of known past and present fish distributions within the Muskegon River watershed. The distributions of fish species were compiled from records located at The University of Michigan, Museums Fisheries Library, Michigan Department of Natural Resources, Institute for Fisheries Research, and Michigan Department of Natural Resources offices in Grand Rapids and Cadillac. Scientific names and phylogenic order follow Robins et al. 1991. For species that are listed under Michigan's Endangered Species Act (Part 365, Endangered Species Protection, of the Natural Resource and Environmental Protection Act, Act 451 of the Public Acts of 1994), their status follows their scientific name. Categories are declining, rare, threatened, endangered, extinct and locally extinct.

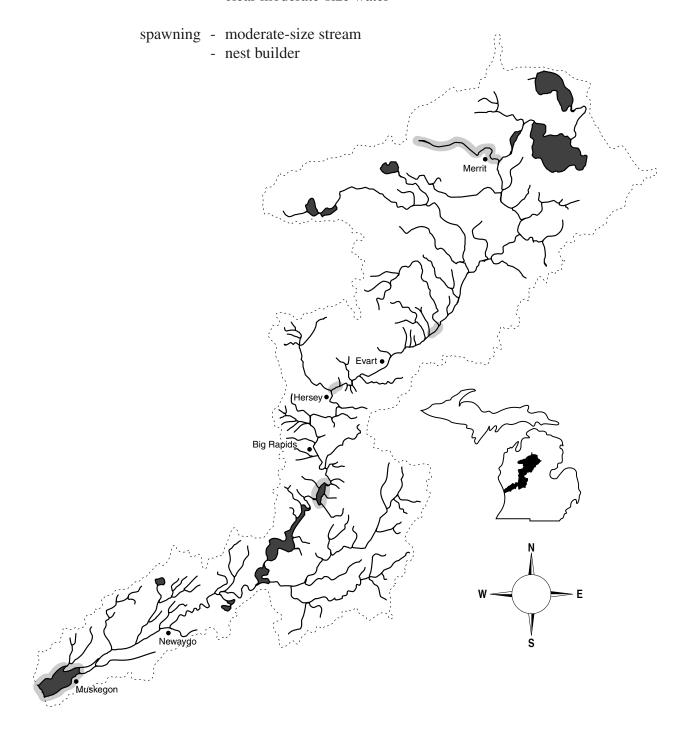

The habitat descriptions were compiled from The Fishes of Ohio (Trautman 1982), Freshwater Fishes of Canada (Scott and Crossman 1973), Fishes of Wisconsin (Becker 1983), Fishes of Missouri (Pflieger 1975), and Fishes of the Great Lakes Region (Hubbs and Lagler 1947).

Chestnut lamprey (*Ichthyomyzon castaneus*)

Habitat:

feeding - stable substrate of sand and silt with light growth of *chara* or quiet backwaters of muck and silt with dense rooted vegetation

- moderate current
- clear moderate-size water

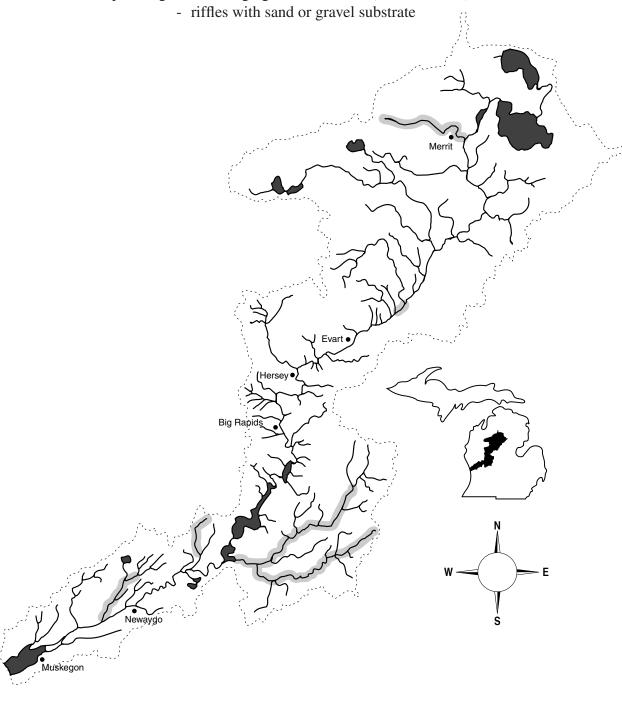

Northern brook lamprey (*Ichthyomyzon fossor*)

Habitat:

feeding - young: low gradient, substrate with bars and beds of mixed sand and organic debris

- moderately warm water

spawning - clear, high gradient streams (<15 feet wide)

Silver lamprey (*Ichthyomyzon unicuspis*) - rare

Habitat:

feeding - young: sand, muck, or organic debris substrate

- adults: clear river water with prey species

spawning - gravel and sand substrate

- moderate gradient

- moderate size stream

- cannot tolerate silt - no dams winter refuge - amnocetes burrow for 4 to 7 years in mud and silt at river margins Merrit Muskegon

American brook lamprey (*Lampetra appendix*)

Habitat:

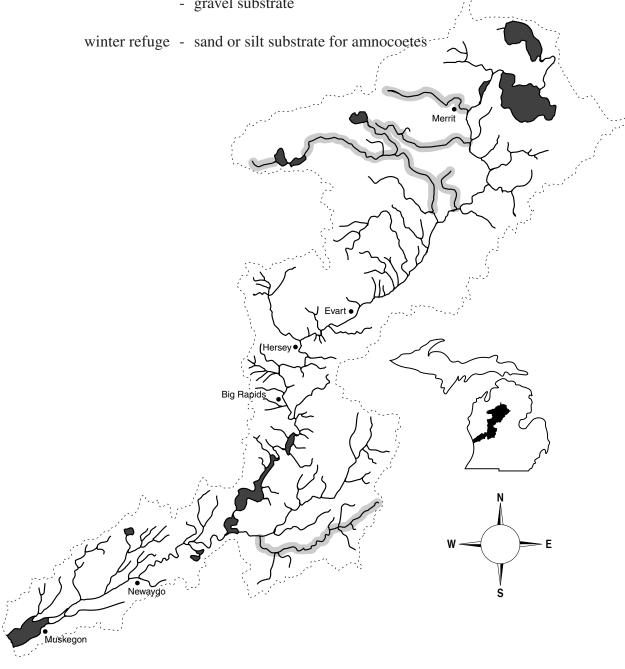

feeding - young: low gradient, substrate with bars and beds of mixed sand and organic debris

- clear cool stream water, sensitive to turbidity

spawning - clear, high gradient streams (>15 feet wide)

- cold water

Sea lamprey (*Petromyzon marinus*)

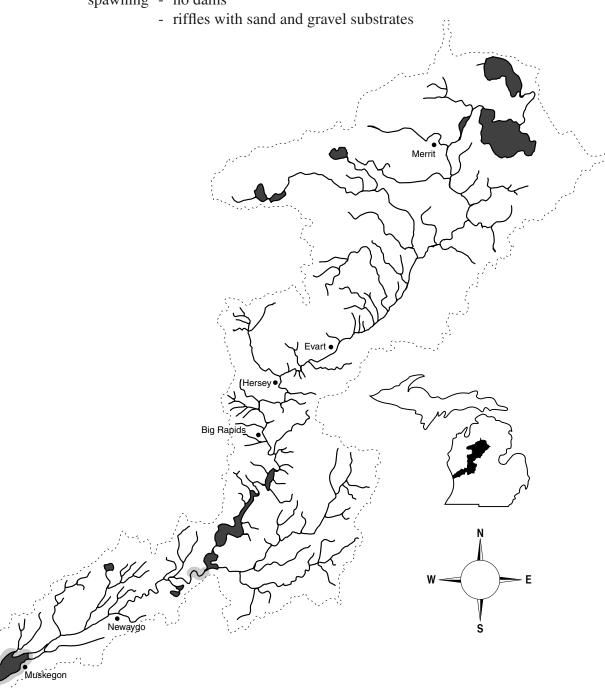

Habitat:

feeding - young: substrate with beds of sand mixed with organic debris

- cannot tolerate silt

- adults: clear cool water of Lake Michigan

spawning - no dams

Lake sturgeon (Acipenser fulvescens)

Habitat:

feeding - shoal areas of large rivers, lakes, and impoundments

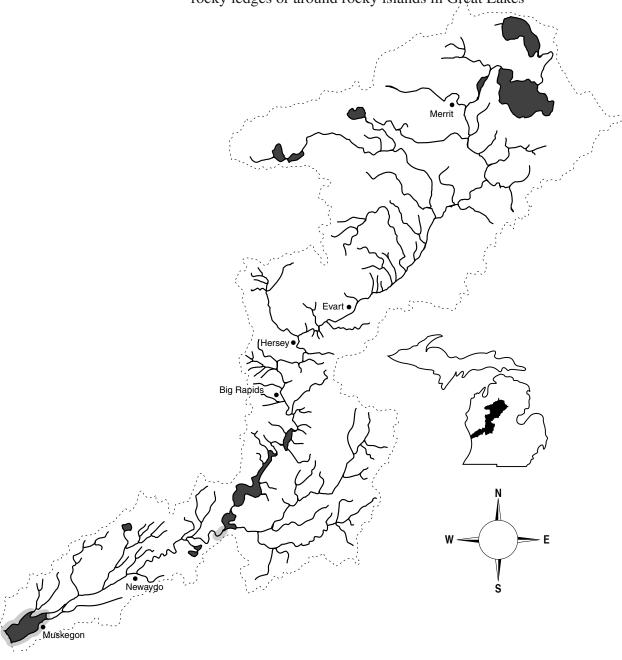

- gravel, sand, rock substrates

spawning - in or before rapids, at the base of dams in rivers

- in 2-15 feet of water

- swift current

- rocky ledges or around rocky islands in Great Lakes

Longnose gar (Lepisosteus osseus)

Habitat:

feeding - adults: in deeper water

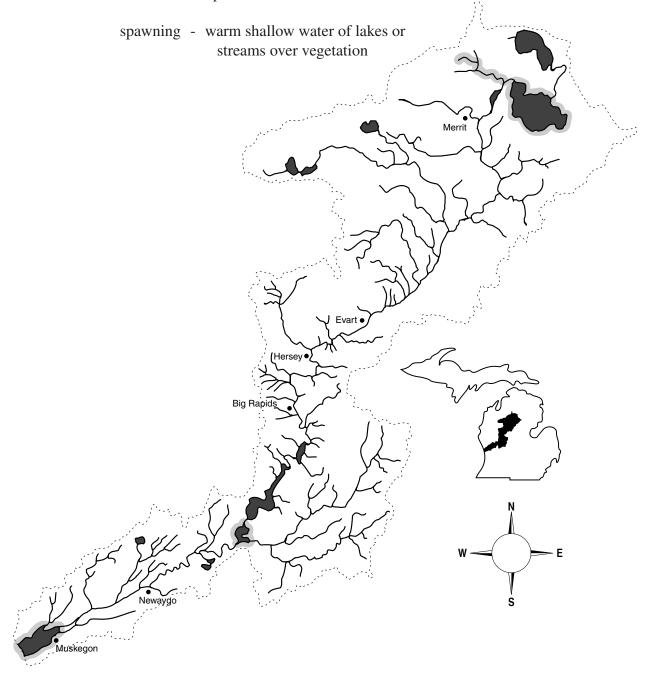

- young: in shallows

- clear water, low-gradient streams, lakes, and impoundments

- will feed in moderate current

- aquatic vegetation preferred, but not necessary

- open water fish

Bowfin (Amia calva)

Habitat:

feeding - clear water

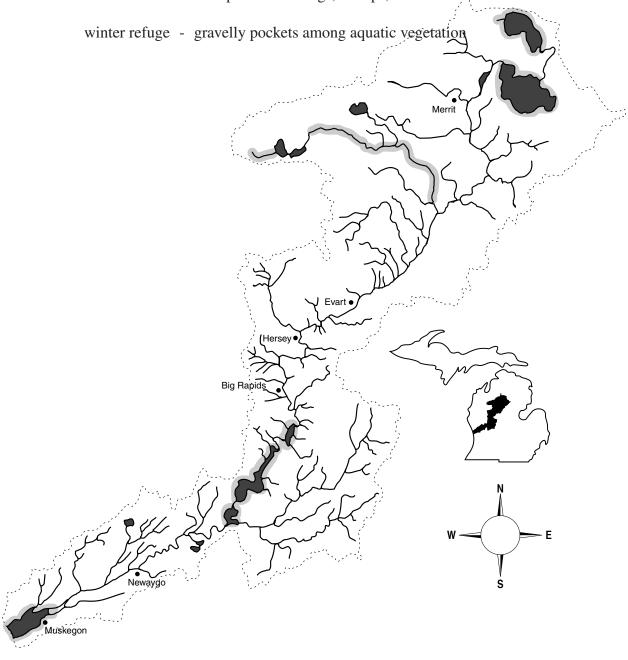

- abundant rooted aquatic vegetation

- low gradient streams, lakes, and impoundments

- tolerate only small amount of silt

spawning - need vegetated water, 1 to 2 feet deep

- can spawn under logs, stumps, or bushes

Alewife (*Alosa pseudoharengus*)

Habitat:

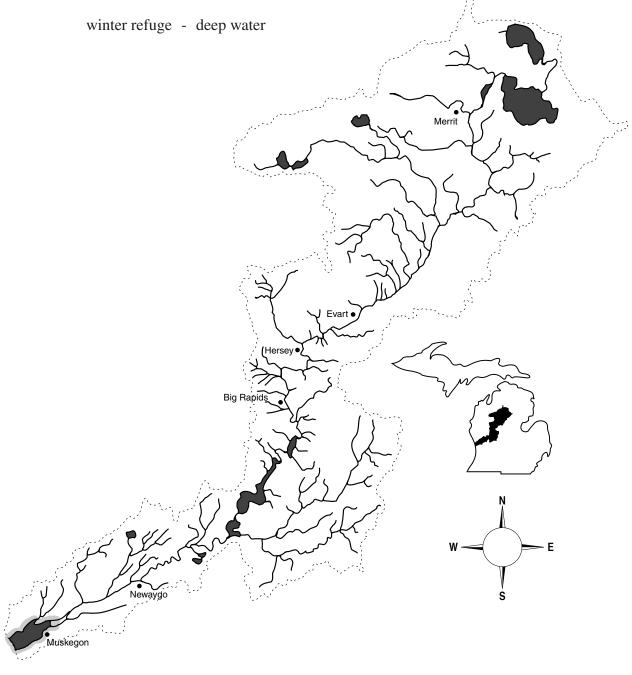

feeding - adults: deep water of Lake Michigan

- young: shallow water of Lake Michigan

- prefers warmer waters

spawning - streams or shallow beaches of lake

- sand or gravelly substrate

Gizzard shad (Dorosoma cepedianum)

Habitat:

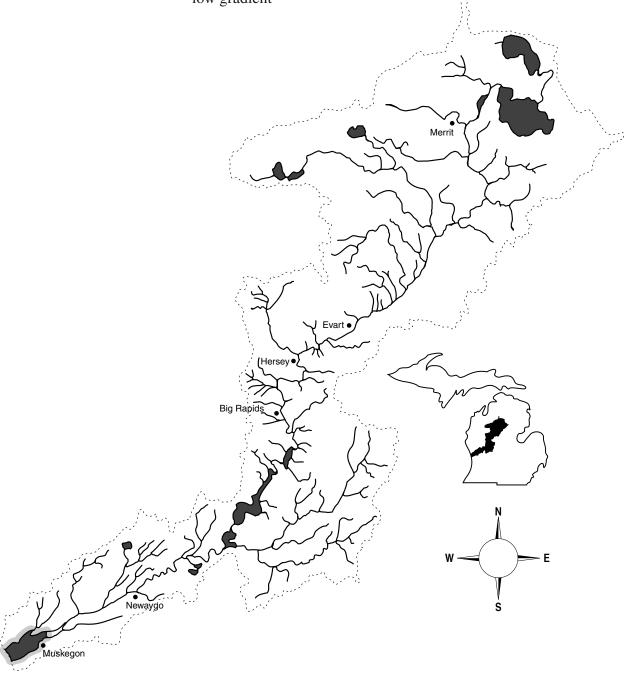

feeding - large streams with low gradient, impoundments, and Lake

Michigan

- tolerant of clear and turbid water

spawning - shallow areas of ponds, lakes, and large rivers

- low gradient

Central stoneroller (*Campostoma anomalum*)

Habitat:

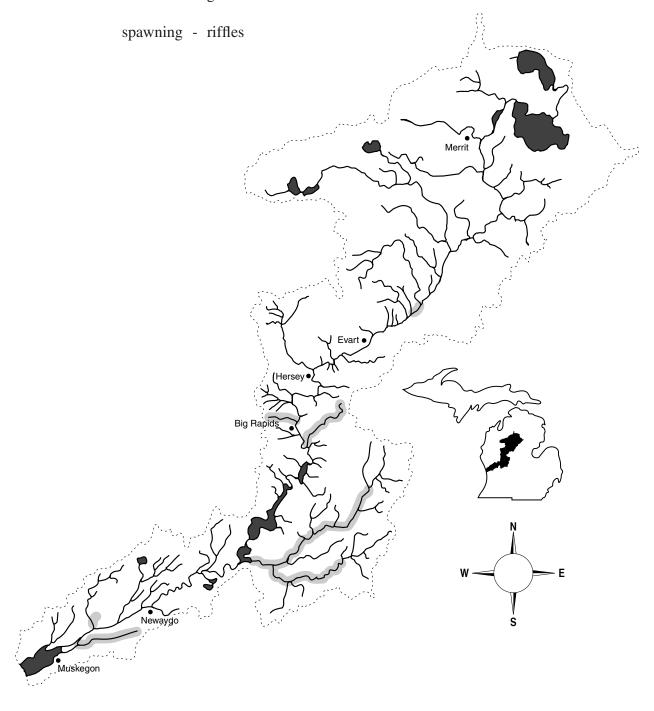

feeding - moderate to high gradients

- rocky riffles

- somewhat tolerant of turbidity

- riffles and adjacent pools of warm, clear, shallow streams

- gravel or cobble substrate

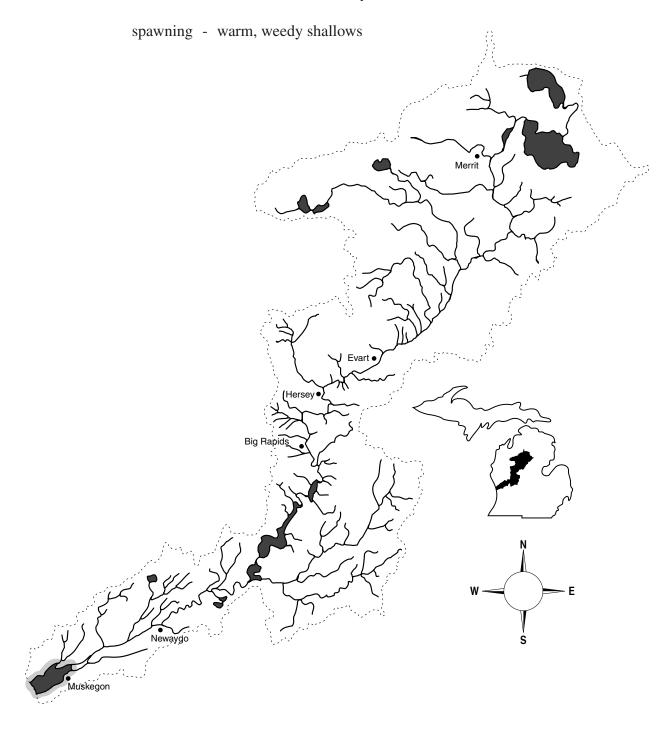

Goldfish (Carassius auratus)

Habitat:

feeding - vegetation

- low gradient, shallow, warm water streams, rivers, lakes, and impoundments
- tolerates some turbidity and siltation

Spotfin shiner (*Cyprinella spiloptera*)

Habitat:

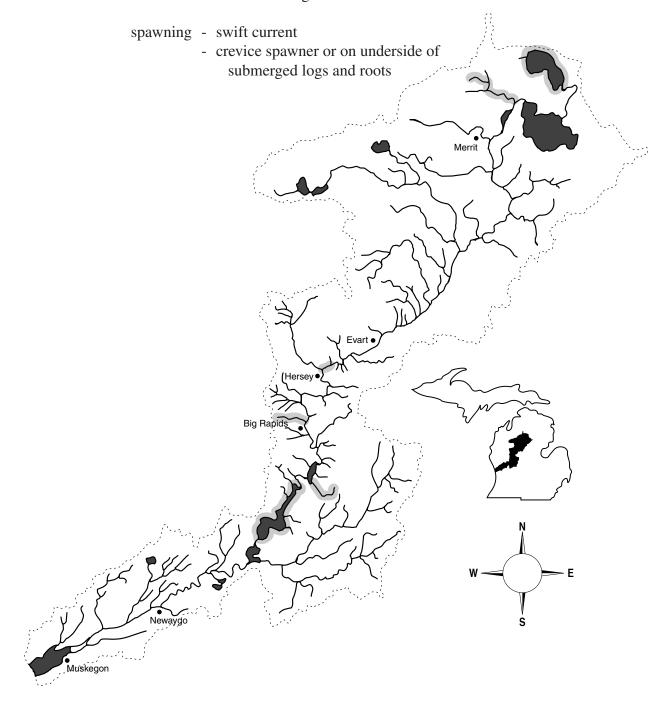

feeding - clear water tolerant of turbidity and siltation

- some current

- shallow depths

- medium sized streams, lakes, and impoundments

- clear sand or gravel substrate

Common carp (Cyprinus carpio)

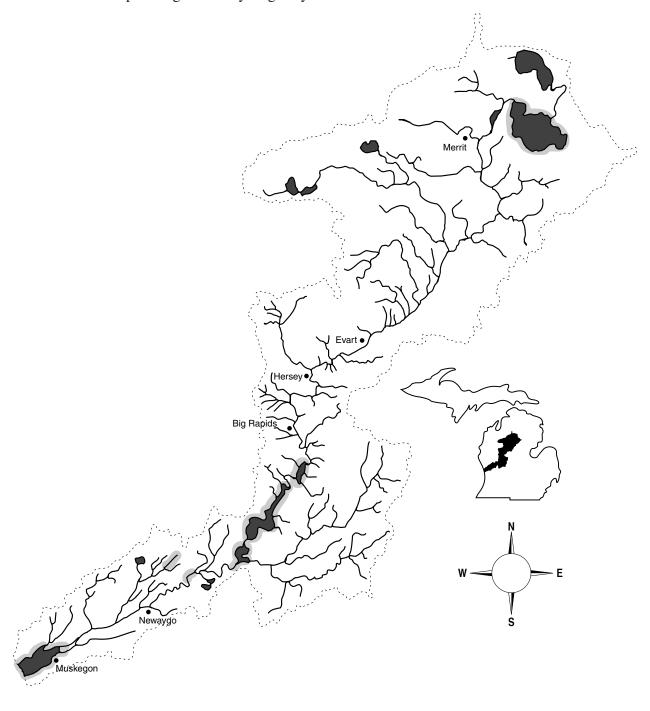

Habitat:

feeding - low gradient fertile streams, rivers, lakes, and impoundments

- abundance of aquatic vegetation or organic matter

- tolerant of all substrates and clear to turbid water

spawning - weedy or grassy shallows

Brassy minnow (Hybognathus hankinsoni)

Habitat:

feeding - cool acidic streams

- slow to moderate current

- sand or gravel substrate

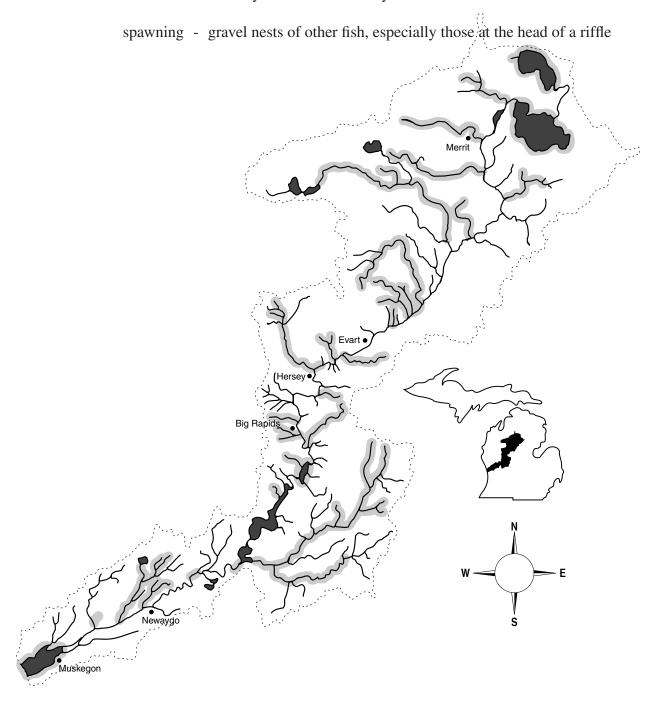

Common shiner (*Luxilus cornutus*)

Habitat:

feeding - small, clear, high-gradient streams and rivers, or shores of clear water lakes and impoundments

- gravel substrate
- can tolerate some submerged aquatic vegetation
- not very tolerant of turbidity or silted waters

Pearl dace (Margariscus margarita)

Habitat:

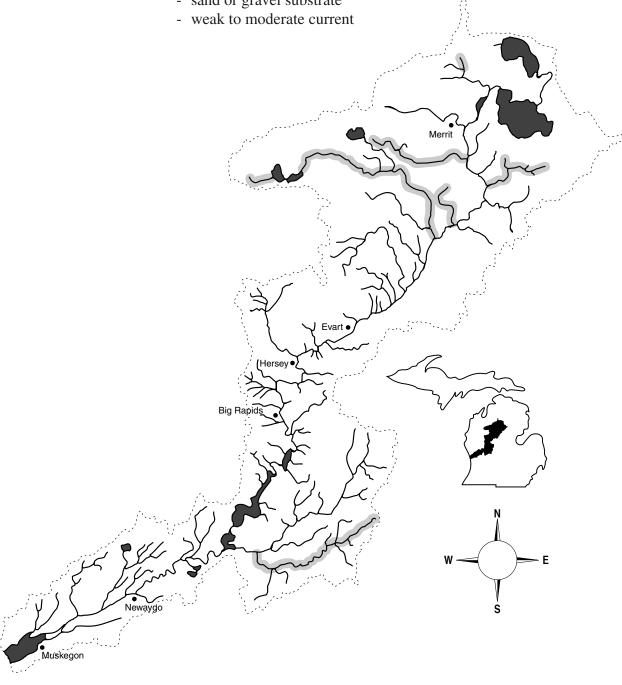

feeding - cool, neutral to acidic streams and lakes

- clear to slightly turbid water

spawning - males are territorial

- clear water, 18-24 inches deep

- sand or gravel substrate

Hornyhead chub (Nocomis biguttatus)

Habitat:

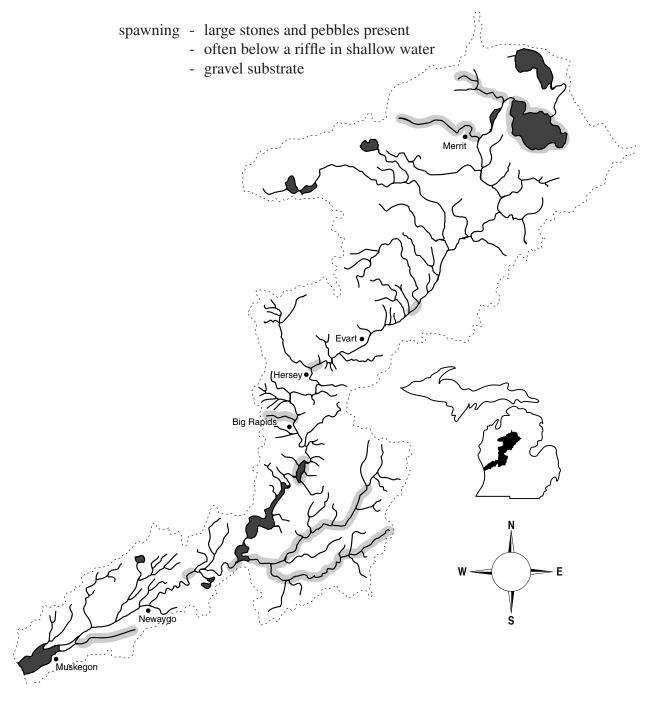

feeding - adults: near riffles

- young: near vegetation

- clear water, does not tolerate turbidity

- gravel substrate

- low gradient streams that are tributaries to large streams

River chub (*Nocomis micropogon*)

Habitat:

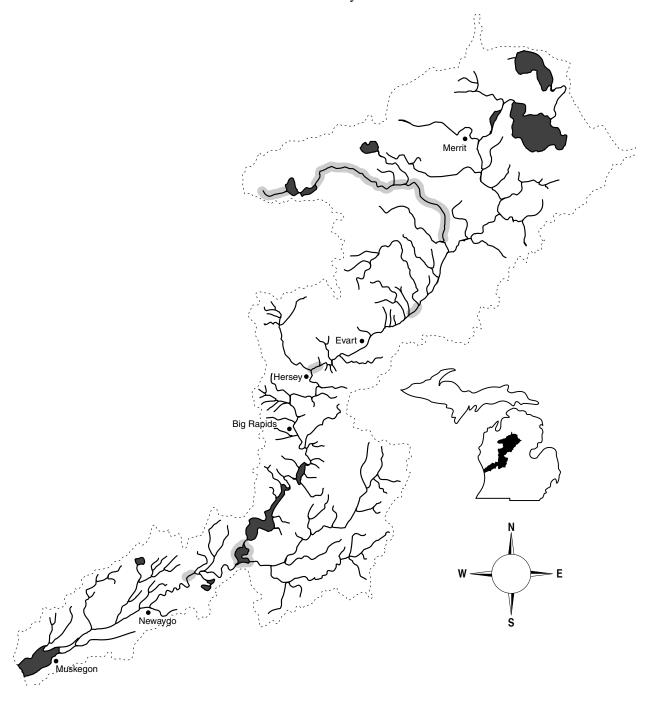

feeding - moderate to large streams

- moderate to high gradient

- gravel, boulder, or bedrock substrate

- little to no aquatic vegetation

- cannot tolerate turbidity or siltation

Golden shiner (*Notemigonus crysoleucas*)

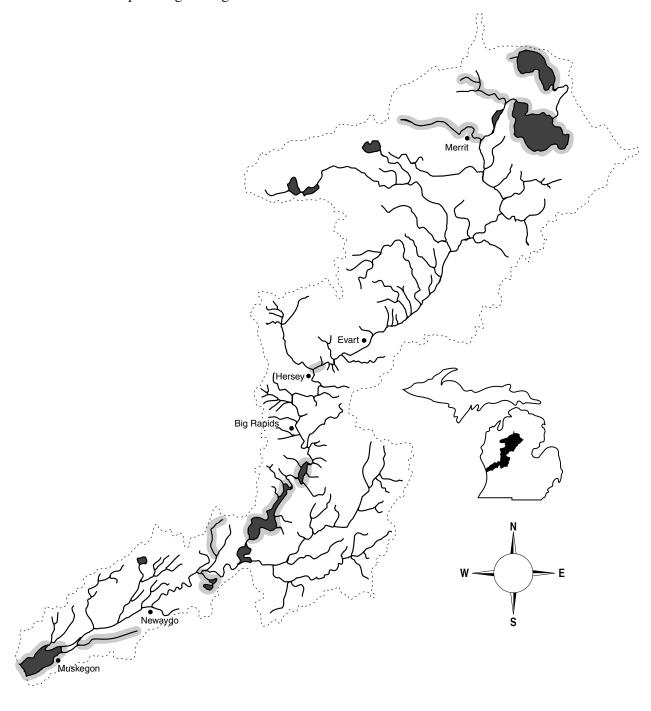

Habitat:

feeding - lakes and impoundments and quiet pools of low gradient streams

- clear shallow water

- heavy vegetation

spawning - vegetation

Emerald shiner (*Notropis atherinoides*)

Habitat:

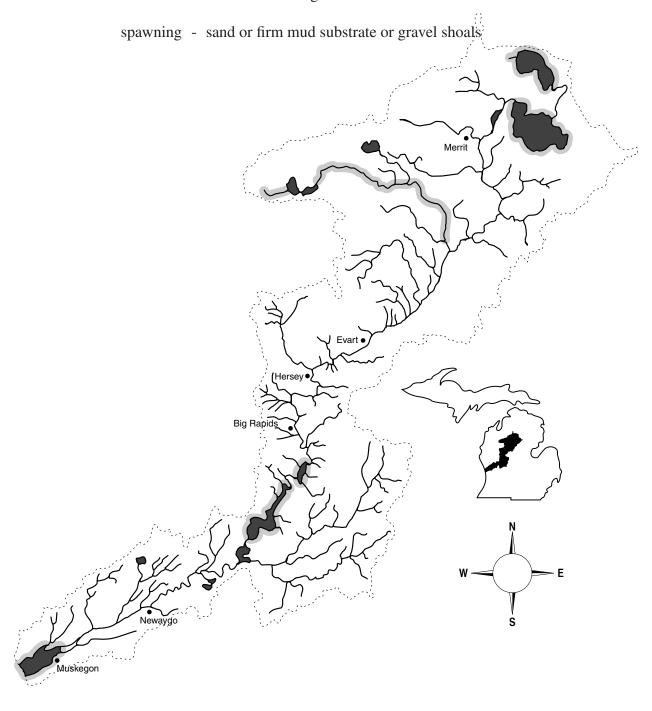

feeding - open-large stream channels

- low to moderate gradient

- range of turbidites and bottom types

- midwater or surface preferred, substrate of little importance

- avoids rooted vegetation

Bigmouth shiner (*Notropis dorsalis*)

Habitat:

feeding - small clear streams

- good flows

- sand or gravel substrate

- open water, free from vegetation

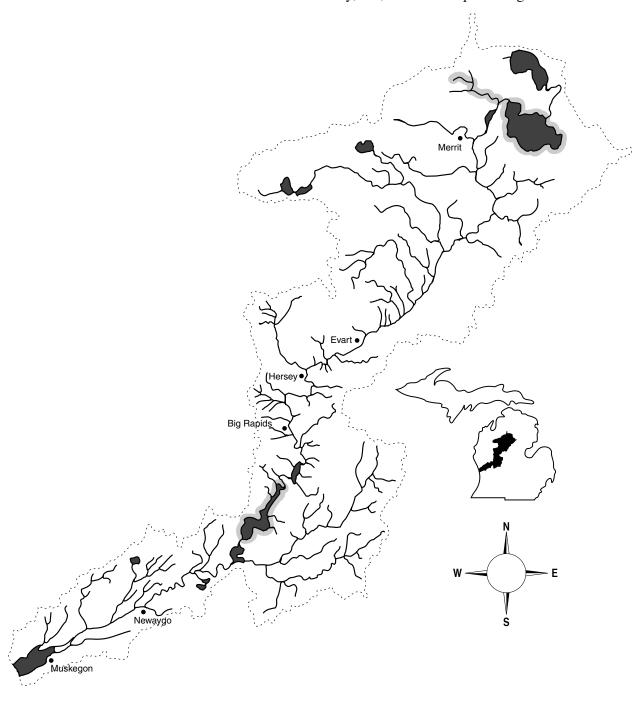

Blackchin shiner (*Notropis heterodon*)

Habitat:

feeding - lakes, impoundments, and quiet pools in streams and rivers

- clear water
- clean sand, gravel, or organic debris substrate
- dense beds of submerged aquatic vegetation
- cannot tolerate turbidity, silt, or loss of aquatic vegetation

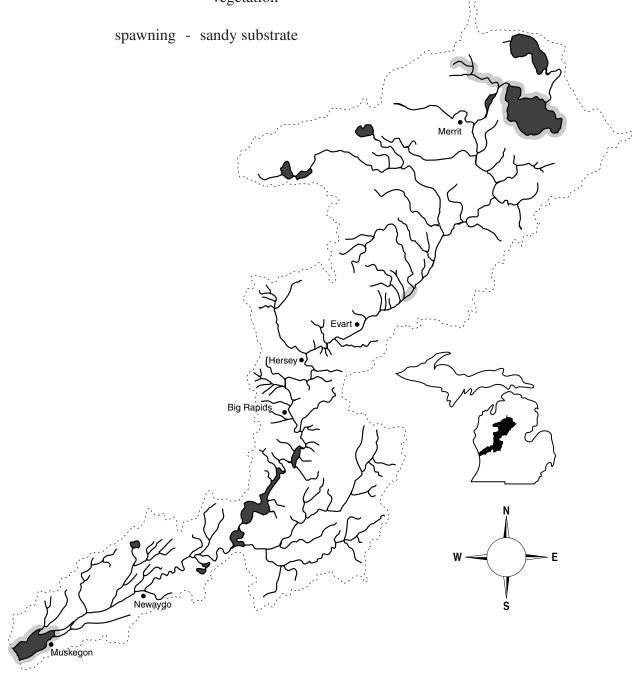

Blacknose shiner (*Notropis heterolepis*)

Habitat:

feeding - clear lakes, impoundments, and pools of small, clear, low gradient streams

- aquatic vegetation
- clean sand, gravel, marl, muck, peat, or organic debris substrate
- cannot tolerate much turbidity, much siltation, or loss of aquatic vegetation

Spottail shiner (*Notropis hudsonius*)

Habitat:

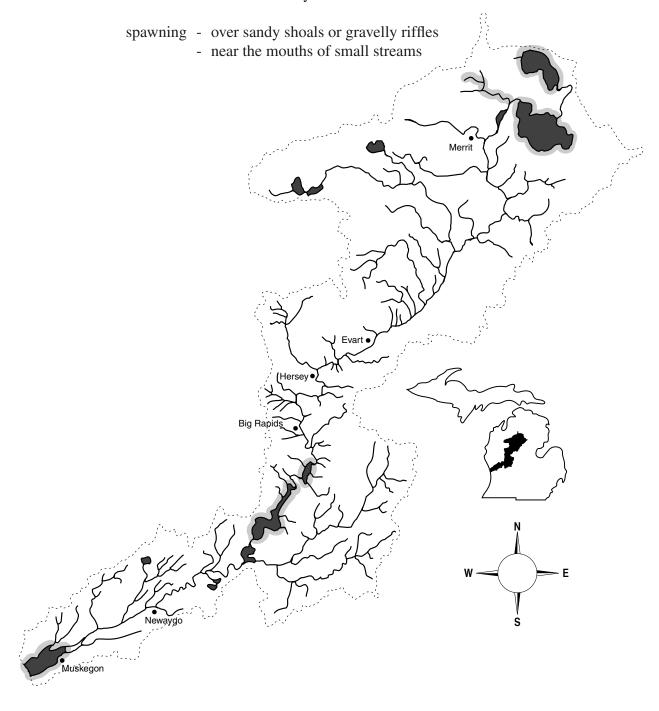

feeding - large rivers, lakes, and impoundments

- firm sand and gravel substrate

- low current

- sparse to moderate vegetation

- avoids turbidity

Rosyface shiner (*Notropis rubellus*)

Habitat:

feeding - moderate sized streams

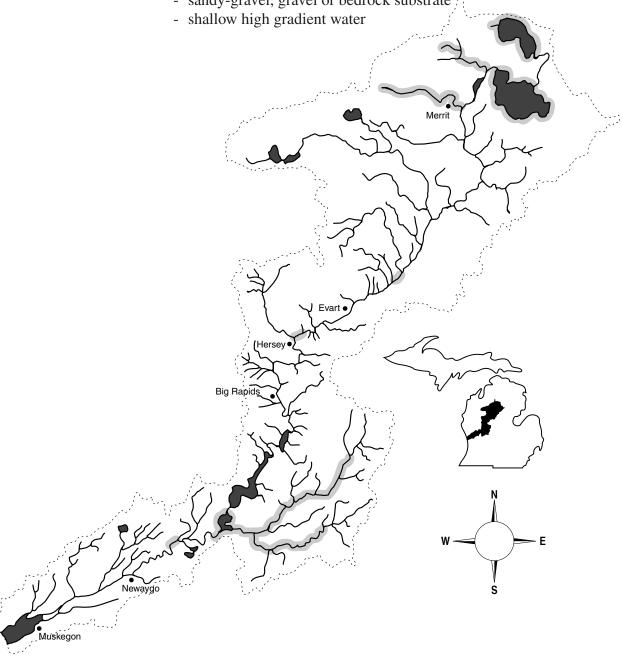

- moderate to high gradient

- gravel or sand substrate; intolerant of silt substrate

- clear water; intolerant of turbidity

spawning - on nests of horneyhead chub, chesnut lamprey, and redhorses

- sandy-gravel, gravel or bedrock substrate

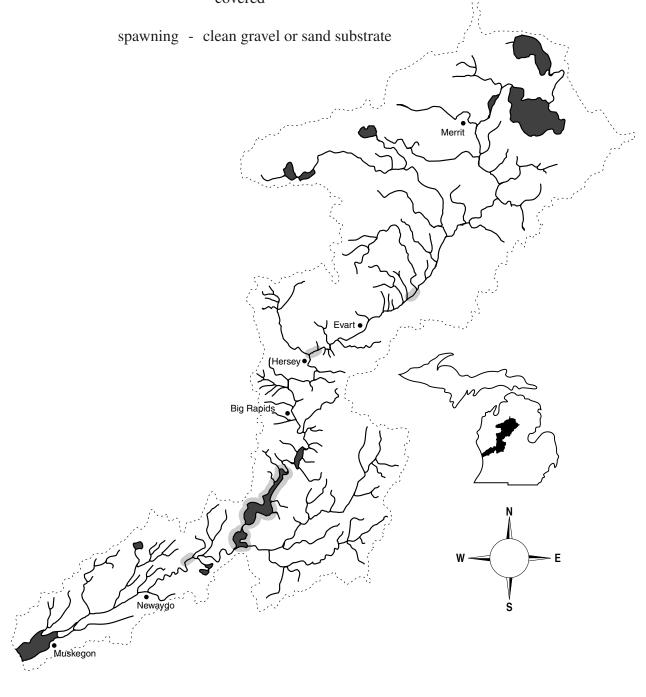

Sand shiner (*Notropis stramineus*)

Habitat:

feeding - sand and gravel substrate

- shallow pools in medium size streams, lakes, and impoundments
- clear water and low gradient
- rooted aquatic vegetation preferred
- tolerant of some inorganic pollutants provided substrate is not covered

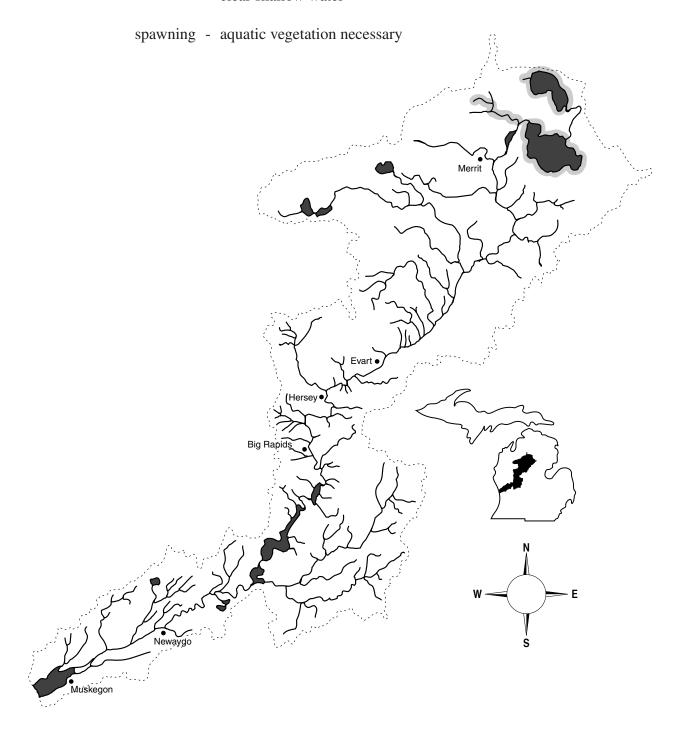

Mimic shiner (Notropis volucellus)

Habitat:

feeding - pools and backwater of streams, moderately weedy lakes and impoundments

- quiet or still water
- clear shallow water

$\textbf{Northern redbelly dace} \ (\textit{Phoxinus eos})$

Habitat:

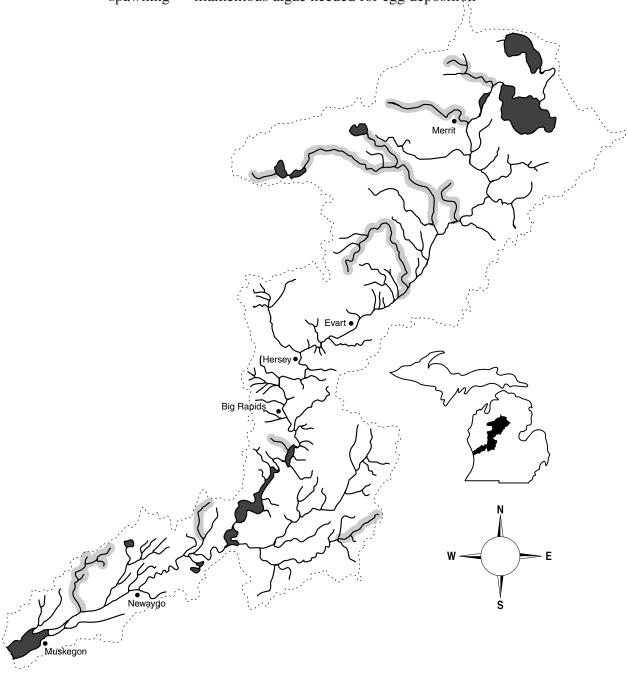

feeding - slow current

- in boggy lakes and streams

- detritus or silt substrate

- clear to slightly turbid water

spawning - filamentous algae needed for egg deposition

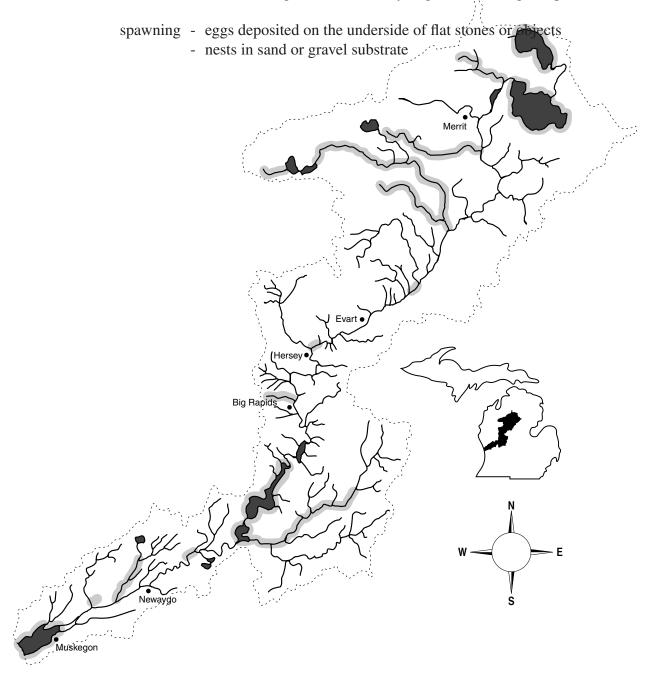

Bluntnose minnow (*Pimephales notatus*)

Habitat:

feeding - quiet pools and backwaters of medium to large streams, lakes, and impoundments

- clear warm water
- some aquatic vegetation
- firm substrates
- tolerates all gradients, turbidity, organic and inorganic pollutants

Fathead minnow (Pimephales promelas)

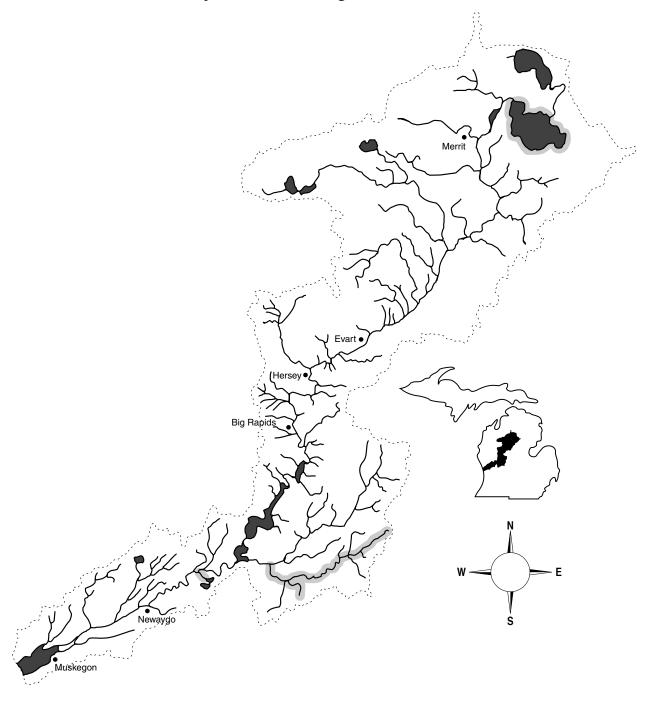

Habitat:

feeding - pools of small streams, lakes, and impoundments

- tolerant of turbidity, high temperatures, and low oxygen

spawning - on underside of objects in water 2 to 3 feet deep

- prefer sand, marl, or gravel substrate

Blacknose dace (Rhinichthys atratulus)

Habitat:

feeding - moderate to high gradient streams

- sand and gravel substrate

- clear cool water in pools with deep holes and undercut banks

- does not tolerate turbidity and silt well

spawning - riffles with gravel substrate and fast current winter refuge - larger waters Merrit Muskegon

Longnose dace (*Rhinichthys cataractae*)

Habitat:

feeding - lakes and streams

high gradientgravel or boulder substrate

Creek chub (Semotilus atromaculatus)

Habitat:

feeding - streams, rivers, or shore waters of lakes and impoundments

- can tolerate intermittent flows

- tolerates moderate turbidity

spawning - gravel nests

- low current
