

Compartment Review Presentation

Roscommon Forest Management Unit

Compartment 71078

Entry Year: 2026

Acreage: 2,696

County: Ogemaw

Management Area: High Sand Plains

Stand Examiner: Avery Sanborn

Legal Description:

T24N R1E Sections 22, 23, 26, 27, 34, 35.

Identified Planning Goals:

Maintain age class diversity in jack pine stand in accordance with Kirtland's Warbler habitat objectives. Liquidate decadent aspen and jack pine stands to either release desirable subcanopy white pine or regenerate aspen while maintaining underrepresented species to promote diversity. Attempt to establish functioning natural pine stands by implementing seed tree harvests in mature red pine plantations with minimal hardwood competition. Establish fuel breaks with timber harvests and maintain by mastication or prescribed fire.

Soil and topography:

Soils in this compartment consist primarily of graycalm sands with minor components of grayling sands. Terrain in the compartment is mostly flat to gently rolling.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

State ownership is solid in sections 22, 27, and 23. Sections 26, 35, and 34 have anywhere from 60 to 400 acres of private ownership.

Unique Natural Features:

Festuca altaica, is known to exist in stand 11 and probably in other areas of the compartment.

Archeological, Historical, and Cultural Features:

None known or detected during fieldwork.

Special Management Designations or Considerations:

None.

Watershed and Fisheries Considerations:

None.

Wildlife Habitat Considerations:

This compartment is a part of the Kirtland's Warbler management area. Maintain jack pine type in age classes as determined to maintain Kirtland's Warbler populations.

Mineral Resource and Development Concerns and/or Restrictions

Surface sediments consist of glacial outwash sand and gravel and postglacial alluvium and peat and muck. The glacial drift thickness varies between 400 and 600 feet.

No known potential exists for metallic minerals in this part of the state. No known active sand/gravel operations exist in the area. There appears to be some potential for aggregate, primarily sand, within the compartment on the uplands, but the compartment might be too far from populated areas (markets) for any potential sand & gravel resources to have much economic value beyond use by the county road commission or DNR for local road maintenance. The compartment is bordered on the west, north, and east by production within the Rose City oil & gas field. The field is relatively old, but the majority of wells are still producing. No new wells have been permitted in the area in the last 30 years, and expansion of the field is unlikely. Secondary recovery operations are occurring to the east of the compartment. Several wells were drilled in the north end of the compartment as attempted in-fill completions, but they were dry holes. State-owned oil & gas rights at the east edge of the compartment are currently leased and held by production. Potential for additional future oil & gas development within the compartment is considered low at this time. The State does not own all the mineral rights within the compartment. Because the mineral estate is the dominant estate, the surface owner must provide the owner of the mineral rights reasonable access to the surface for mineral exploration and development.

Vehicle Access:

Vehicle access in this compartment is good with both section roads and roads within sections.

Survey Needs:

None needed.

Recreational Facilities and Opportunities:

There is one snowmobile trail that runs through the South half of the compartment in sections 34, 35, 27, and 26. Assure logging ahead signs are used to notify vehicle operators of the logging activity. Compartment is used for deer and bobcat hunting.

Fire Protection:

This compartment is almost entirely dense KW jack pine. Urban Interface to the SE of the compartment. Numerous section and interior roads should make access easy.

Additional Compartment Information:**The following reports from the Inventory are attached:**

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

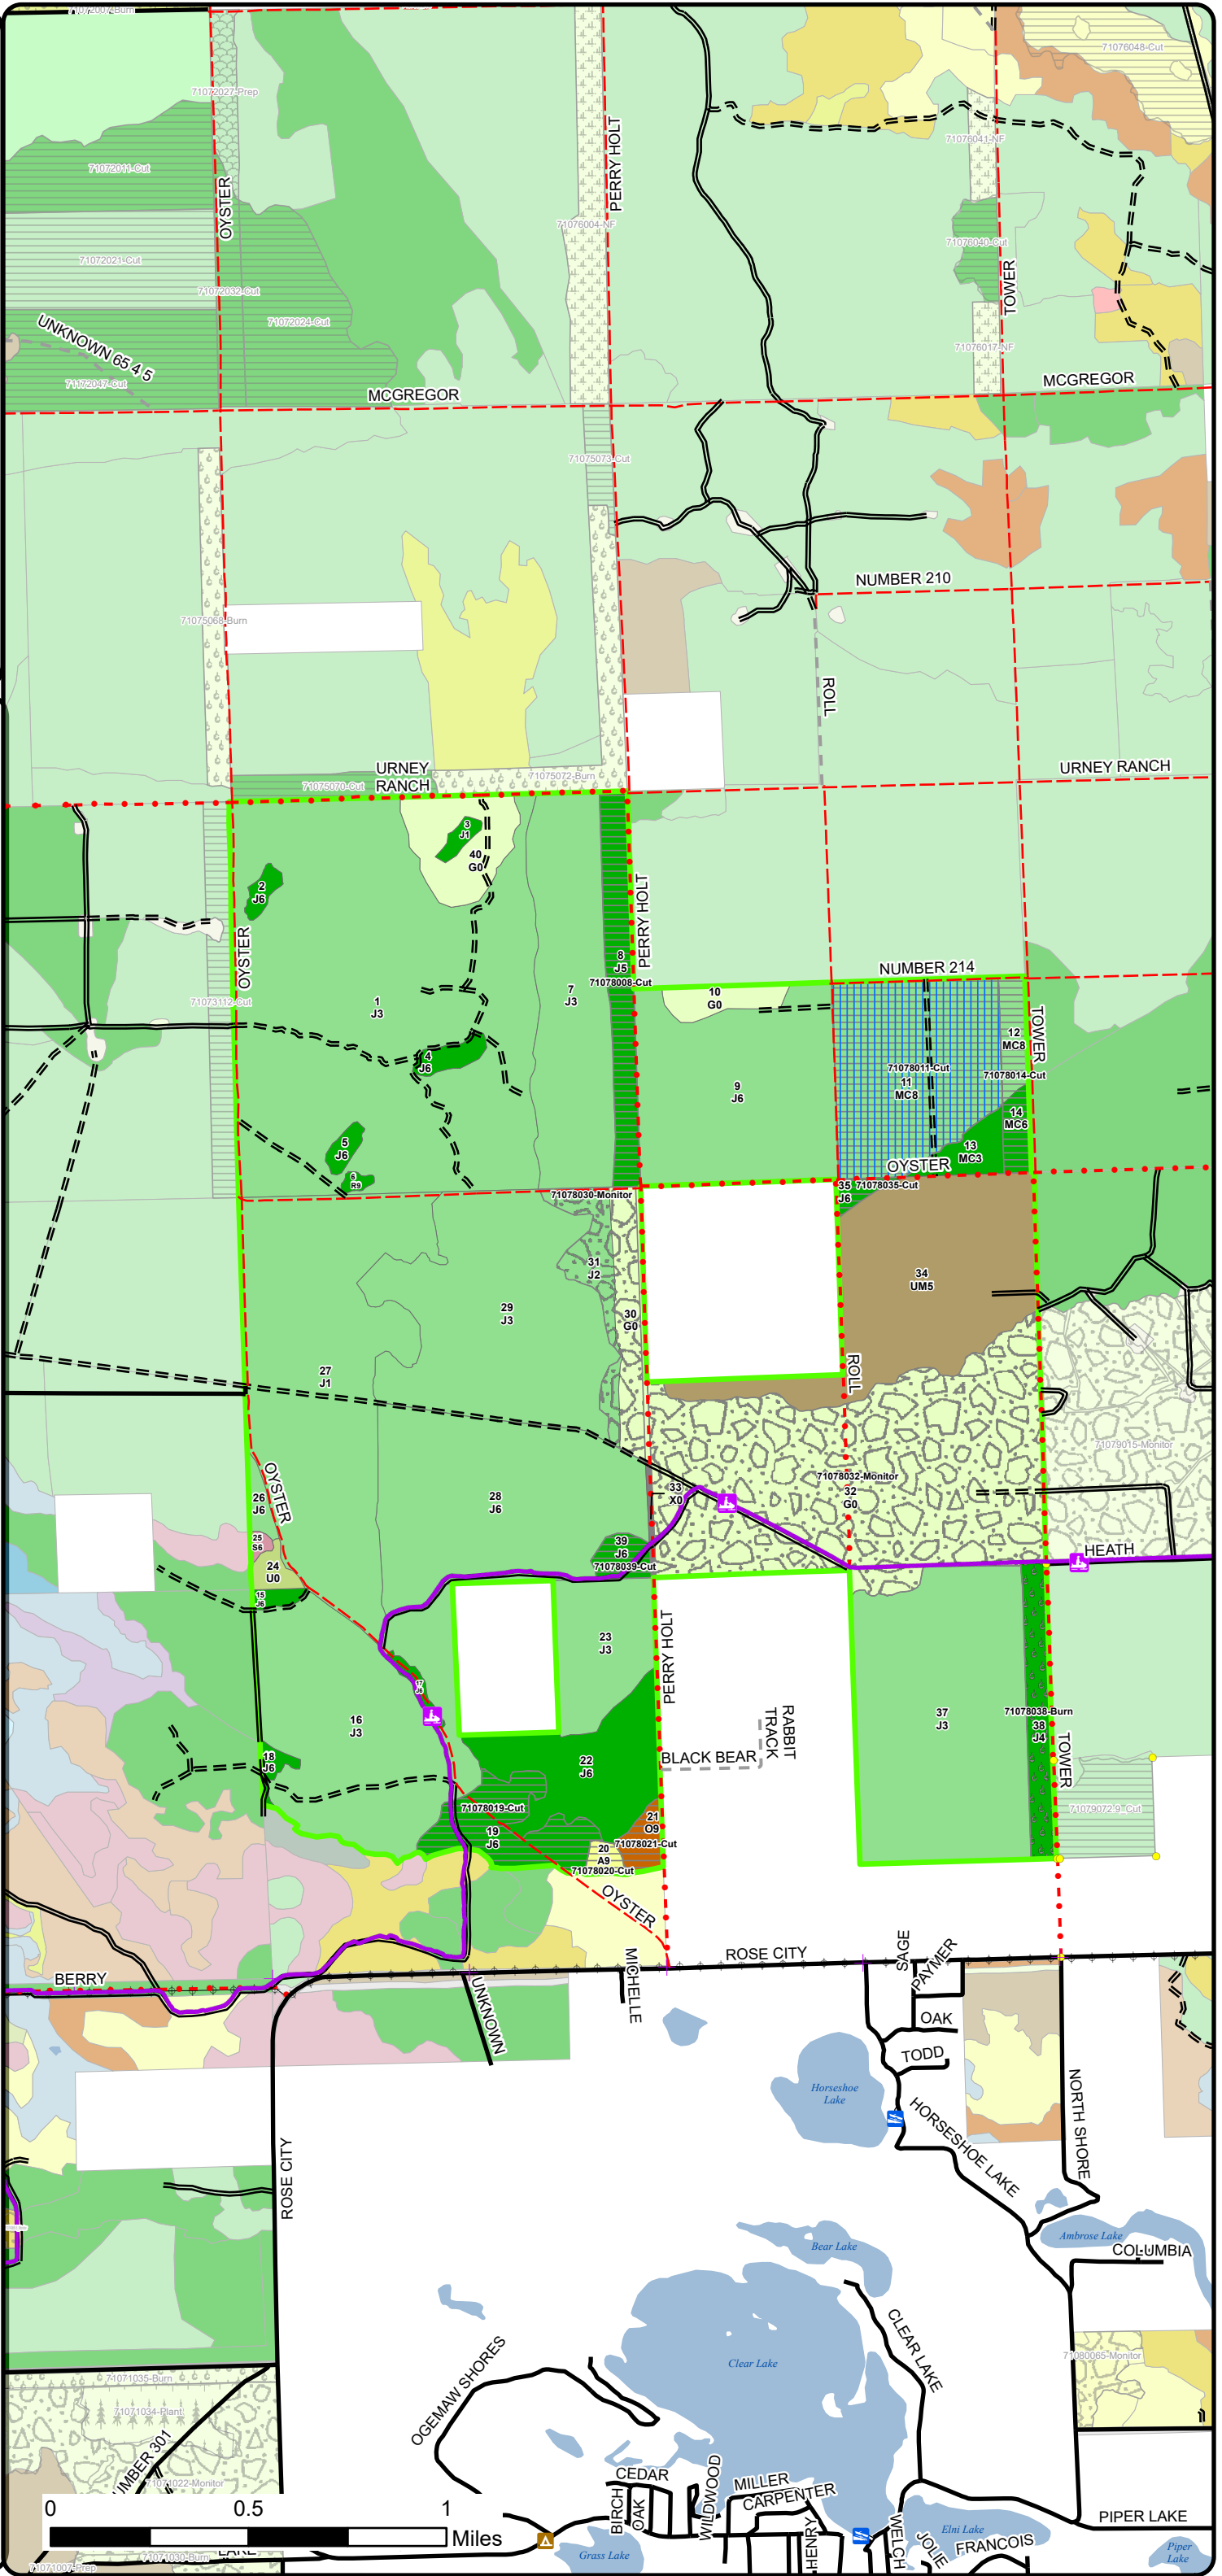

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

Report 5 – PROPOSED SPECIAL CONSERVATION AREA* (SCA) DETAILS

* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
----------	--------------	-------------	----------------	-------

Comments

Report 6 – EXISTING SPECIAL CONSERVATION AREA DETAILS

* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area
 HCVA = High Conservation Value Area
 SCA = Special Conservation Area

Conservation Area	Type	Description
HCVA	Designated Critical Habitat	Critical habitat areas are established via a consultative and cooperative process between the DNR and the U.S. Fish and Wildlife service for the recovery of threatened and endangered species, as governed by Part 365, Endangered Species Protection, of the Natural Resources and Environmental Protection Act, 1994 PA 451, and the Federal Endangered Species Act of 1973. This is an active program, with proposed species plans in various stages of review. As of now only two exist, Kirtland Warbler Habitat and Piping Plover Habitat.

11	42140 - Planted Mixed Pine	Sawtimber Medium	119.7	96	51-80	N/A	Stand ranges from a few spots of R9 which could be thinned, numerous spots of R9 which do not need to be thinned, and a J3O2 cohort which is just converting to pole size. There are multiple ages of red pine and at least 2 ages/sizes of jack pine - possibly due to past fire history in this stand. The southwest corner and west edge of the stand are heavy to oak poles and saplings. Stand appears to be a natural stand but planting records from 1927 were found. Recommend holding stand another 10 years until jack pine and oak in the understory is more merchantable and the surrounding stands grow up more, stand is surrounded by KW blocks but does not appear to be in any of them currently
