SURVEY PRIORITY JUSTIFICATION

1. Is litigation involved now or being threatened? Explain:

N/a

2. If trespass is on state land, is the survey likely to prevent further trespass and harm, or is it to prove trespass? Explain:

N/a

3. Is prevention of access to a significant area of state land involved? Explain:

No.

4. Will a survey allow harvest of timber that is being held from the market due to survey problems? What is the value of the proposed sale? Explain (i.e., give the compartment, year of entry, timber condition, etc.):

The stands that are being held up due to survey make up roughly 55 acres.

Stand 53 is a mixed Aspen/Pine stand with fair to good quality timber. Valued roughly at \$25-\$35,000. The aspen is becoming overmature resulting in some decline of timber and value.

Stand 66 is a mixed jack pine and aspen stand. Overall health and quality of the timber is fair. Overall value would be low due to low volumes but could be estimated around \$15,000. Establishing the corner would also increase the potential for planted red pine is current management objective fails.

5. Are there reasonable alternatives to a survey that will allow at least a partial or temporary solution? (Example: Reduce size of the sale, agreement with or notification of adjacent landowner until proper survey can be done, establish line yourself, etc.) Explain:

No survey will result in reduction of harvestable acres. By establishing these survey corners, it will allow us to continue to actively manage these areas into the future.

6. Other:

N/a
