Sale Specific Conditions & Requirements

Sale Name: West 290 Kw Sale Number: 72-030-14-01

1 - Sale Area

1.2 - Boundaries

1.2.1 - Painted boundaries (1/14)

The sale boundary and Payment Unit boundaries are marked and identified by blue, red, green, and yellow paint, in addition to unpainted designated Payment Unit boundaries following forest roads as shown on the Timbersale Map.

Exterior sale boundary lines against private property are marked with blue paint. Do not cut those blue line trees unless there is written agreement from the adjacent captive cervid facility to remove those trees for maintenance purposes immediately along their deer enclosure fence.

Exterior sale boundary lines against state are marked with red paint. Cut and utilize merchantable 2.1.1 Included Timber red line trees - leaving the stump mark - once the adjacent timber has been cut, except for along the swamp in Units 1 & 2 where some of the red line trees will be cut and left under 5.2.4.1 Dead and Down Creation.

One interior retention island boundary is marked with green paint. Do not cut green painted boundary line trees. Witness trees associated with survey corners are also marked with green paint. Per General Conditions & Requirements 5.5.1 those trees and survey markers must be protected.

Interior Payment Unit boundaries are marked with yellow paint. In addition, north of unit 9, the snowmobile trail and the two forest roads running east of it are designated unpainted Payment Unit boundaries. Yellow painted trees designating an interior Payment Unit boundary are only to be cut when all surrounding Payment Units have been paid and if they meet the 2.1.1 Included Timber definition.

2 - Timber Specifications

2.1 - Included Timber

2.1.1 - Clearcut unit(s) with unmerchantable trees (6/14)

Within Payment Unit(s) 1-9, cut all trees that are two (2) inches or more at DBH except Red Pine, White Pine, & White Oak.

2.1.11 - Description of timber note (2/04)

Note that 207 MBF of Jack Pine were converted to pulpwood, 10 cords of Scotch Pine were added to the Jack Pine pulp, the Mixed Softwood contains Black Spruce & Balsam Fir, and the Mixed Hardwoods contains Red Maple & Black Cherry.

2.2 - Utilization

2.2.2 - Chipping required (5/14)

This sale must be chip harvested to facilitate subsequent planting operations and meet Kirtland's warbler habitat requirements. The Purchaser has the option to produce sawlogs or pulpwood bolts, but the remaining portion of the trees must be chipped and hauled. The requirement to retain approximately 1/6 to 1/3 of tree tops and limbs less than four inches in diameter does not apply (G. C. & R. 2.2) because jack pine has lower nutrient demands.

2.2.3 - Stump heights (4/07)

Stump heights within The Sale Area shall not exceed 6 inches for all trees. This is in order to facilitate planting operations.

4 - Transportation

4.1 - Construction

4.1.3 - Slash and earthen piles (8/04)

Piles or windrows of earth along roads and landings that have been widened or constructed shall be leveled. Slash from road maintenance or construction, including stumps, shall be chipped or spread out so that it doesn't hinder trenching and planting operations.

4.1.6 - Road construction (1/09)

Construction of new roads, landings, or improvement of existing roads shall be done in such a way as to minimize the environmental and visual impacts. Merchantable trees shall be cut and utilized unless otherwise directed. Non-merchantable

trees shall be severed and laid flat on the ground. Slash shall be chipped and utilized or spread out so that it does not hinder trenching and planting operations. Stumps shall be set upright, not left on edge, and be moved at least 10 feet away from the road edge. Disturbed soil shall be feathered into the woods and not left in berms or windrows.

4.1.7 - Road closure (10/11)

All new roads built into the sale must be blocked to vehicle traffic upon completion of the sale. Overgrown roads that are reopened shall be considered new roads. Closing work may require constructing a four (4') foot high berm of stumps and logs covered with dirt and/or scattering stumps and slash along segments of the road. Contact the sale administrator for specific details of design and placement.

4.1.11 - Permits (2/12)

The Purchaser will secure any necessary permits that may be required.

5 - Operations

5.1 - Notification

5.1.1 - Pre-sale conference (10/11)

A pre-sale conference between the Purchaser and sale administrator is required prior to beginning any operations. The Unit Manager or his/her representative must be contacted at least 5 days in advance to schedule the conference.

5.1.4 - Post-sale conference (6/11)

A post-sale conference on site between the Purchaser and sale administrator is required prior to the completion of active logging operations to determine clean-up and repair of landings, road edges, and the fulfillment of other contract specifications.

5.2 - Conduct of Operations

5.2.1 - Slash

5.2.1.1 - Slash within sale area (2/04)

No trees are to be felled outside the sale area and all slash is to be kept at least 10 feet back from the blue paint line.

5.2.4 - Dead and Down Creation

5.2.4.1 - Dead and down creation, marked trees (10/13)

Red-painted Spruce and Balsam Fir boundary line trees along Payment Unit 1 & 2's swamp edge must be left until the adjacent Included Timber has been cut and taken to the landing. After that, those line trees are to be felled into the adjacent swamp and left for snowshoe hare habitat. If more than one tree is marked next to another, fall them so their tops or trunks overlap.

5.2.31 - Landing locations (9/13)

Material from Unit 1 must be processed at a landing within or immediately adjacent to that unit. This is necessary to limit the spread of Scotch Pine seed from that unit into adjacent units. There is a good potential landing site near the southwest end of Unit 1, just across the line in Unit 2.

5.2.38 - No decking against live trees (2/04)

Cut products may not be decked against unmarked or designated leave trees.

5.2.40 - Pathway protection (10/10)

The Midland to Mackinaw Pathway is a hiking trail and is shown on the Timber Sale Map. It runs down the Snowmobile Trail through the sale area. Do not cut trees or damage posts with blue pathway signs. Maintain a 20-foot wide slash, debris, and rut free zone daily, using the pathway as the centerline. Skidding across the trail may only occur in locations approved by the sale administrator.

5.2.41 - Snowmobile trail protection (9/11)

The Roll Trail (#409) is a snowmobile trail and is shown on the Timber Sale Map. The Midland to Mackinaw Pathway also runs down this segment of snowmobile trail. Do not cut or damage posts with orange trail markers or traffic control signs. The snowmobile trail may not be used for any timber sale operations from December 1 to March 31 without Unit Manager permission. If the trail is used for hauling, it must be graded to the satisfaction of the Unit Manager or his/her representative prior to December 1st. If permission is granted to use the trail for hauling during the snowmobile season, then a snow covered base must be left on the trail. The snowmobile trail may only be crossed at right angles. Maintain a 20 foot wide slash, debris, and rut free zone daily using the snowmobile trail as the centerline. Decking of forest products will not be permitted along the snowmobile trail without Unit Manager permission. All stumps within 20 feet of the snowmobile trail centerline must be cut at ground level. In addition, any trees cut within 5 feet of the trail may need to have the stumps removed and disposed of

according to the direction of the Unit Manager or his/her representative.

5.4 - Soil Protection

5.4.1 - Rutting restriction, general (1/09)

Operations are to cease immediately if equipment and weather conditions result in rutting of roads and skid trails which is 12 inches or greater in depth and 50 feet in length. The Unit Manager or his/her representative may restrict hauling and/or skidding if ruts exceed the specified depth. With the Unit Manager or his/her representative's approval, the Purchaser may return to the area when the risk of rutting has decreased.

5.4.2 - Skid trails (2/04)

Skid trails up and down slopes should be avoided. If however this is unavoidable, these trails will be left in a non-erodible condition using water bars, logs, and slash. Placing of slash on these skid trails while logging is ongoing may alleviate need for any further action. At the direction of the sale administrator, seed, fertilizer, and mulch may also be required.

5.8 - Protection of Endangered Species

5.8.1 - Kirtland's warbler (1) (10/12)

This sale is adjacent to a young jack pine stand which may be used by the endangered Kirtland's Warbler. The Department reserves the right to temporarily restrict all harvesting operations in a buffer zone of up to 500 feet if it is determined that Warbler territory has been established in the adjacent stand. The restricted period, if put into effect, would apply from May 1st to August 15th.

6 - Safety and Fire Prevention

6.2 - Signing

6.2.1 - Road posting (9/09)

The Purchaser is responsible for posting and maintaining caution signs on the #409 Roll Trail prior to beginning operations. The road must be posted at appropriate distances from the sale area to warn of logging activity and truck traffic. Signs must be removed when harvest operations are suspended or completed.

7 - Other Conditions

7.2 - Extensions

7.2.2 - No extensions (3/09)

There will be no extensions granted on this contract. The purpose of this sale is to create habitat for the endangered Kirtland's warbler. This sale is already scheduled for planting. Wood must be removed from the scheduled planting area by March 31, 2016.

7.3 - Contract Modifications

7.3.3 - Modification for reforestation (8/05)

When contractual work of Purchaser has been accepted for any Payment Unit identified on Sale Area Map, Payment Unit will be eliminated from the Sale Area on written notice so that reforestation operations can begin.

7.5 - Loss

7.5.1 - Deteriorating timber (7/09)

The sale area has received damage from jack pine budworm and oak decline. The overmature components are losing volume through decay, dieback and outright mortality. The Purchaser should harvest the wood as soon as possible. The Department of Natural Resources is held free of responsibility of any further damage or deterioration due to delay in harvesting.
