

Compartment Review Presentation

Baraga Forest Management Unit

Compartment 11044

Entry Year 2028

Acreage: 2,008

County: Houghton

Management Area: Houghton Hardwoods

Stand Examiner: Katherine Dorvinen

Legal Description:

Elm River Township
T51N, R35W, Sections 17
Laird Township
T51N, R35W, Sections 16, 19, 20 and 21

Identified Planning Goals:

To maintain a healthy sustainable forest with special consideration to wildlife and fisheries habitat.

Soil and topography:

There are some steep hills along the rivers and streams. The remainder of the land is level to rolling. Soils are combinations of: Munising loamy fine sand and fine sandy loam, Yalmer sandy loam, Liminga fine sand, Alcona loamy fine sand, Graveraet loam, Kalkaska sand, Halfaday-AuGres sands, Sturgeon silt loam, Arnheim silt loam and Pelkie fine sand.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

State land borders the compartment the north, east and west. Several small parcels of private ownership border the compartment to the south where some of the owners have harvested timber from their parcels, but the majority of the private owners use their land as homes or for recreational purposes. The land to the northeast is owned by three different land management companies with primary goals of timber management.

Unique Natural Features:

MNFI indicates the potential for Red Shouldered Hawk, Eagle, Osprey, Great Blue Heron rookery, Goshawk, Moose and Gray Wolf in the compartment. There is also potential for Wood Turtle along riparian corridors.

Archeological, Historical, and Cultural Features:

Section 16 is sensitive for precontact sites.

Special Management Designations or Considerations:

BMP guidelines should be followed around the intermittent streams, Otter river and Bruno creek watercourses.

Watershed and Fisheries Considerations:

This compartment contains Beaver Creek, the West Branch of the Otter River, and Bruno Creek, all of which are designated trout streams. This compartment also contains six unnamed designated trout streams. Maintain a riparian buffer to the high bank of the valley wall along all the rivers/streams in this compartment, which are in stand 8.

Wildlife Habitat Considerations:

Managing habitat for; black bear, blackburnian warbler, pileated woodpecker, ruffed grouse, northern goshawk and American marten should be considered when planning harvest specifications in this this compartment. There is also a deer wintering complex in this compartment.

Mineral Resource and Development Concerns and/or Restrictions

Surface sediments consist of coarse textured glacial till. There is insufficient data to determine the glacial drift thickness. The Precambrian Jacobsville Sandstone subcrops below the glacial drift. The Jacobsville was previously used as a building stone. Limestone quarries are located two miles to the east, but the outlier formation is not present here. Abandoned copper mines and crushed basalt piles are located eight miles to the northwest. This area has not been previously leased for metallic exploration. There is no economic oil and gas production in the UP.

Vehicle Access:

The Pike Lake Road is a county road which passes through section 19, The Beaver Creek Road starts north of the Otter River on the Pike Lake Road and heads east across Beaver Creek and through sections 19, 20 and 17 where it ends south of Bruno Creek. Access to the lands north of Bruno Creek can be obtained through a series of logging roads which head south from the Hazel Swamp Road. There is no formal access to the lands south of the Otter River.

Survey Needs:

None identified at this time, will be addressed as needed in the future.

Recreational Facilities and Opportunities:

The Otter River and Bruno Creek water courses offer some excellent fishing opportunities. The large expanse of continuous forest offer great hunting opportunities for both large and small game.

Fire Protection:

This compartment has little to no potential for a large fire with the primary cover type being northern hardwoods. Equipment access would be the primary issue for fire suppression activities.

Additional Compartment Information:

80 Acres Acquired in Fall Of 2018. T51N R35W sec 17, SE1/2 SE14

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**
