

Compartment Review Presentation

Newberry Forest Management Unit

Compartment 42084

Entry Year: 2027

Acreage: 7,607

County: Luce

Management Area: Seney Lake Plain

Stand Examiner: Nicholas Wheeler

Legal Description:

T47N R10W Sections 1, 2, 3, 4, 9, 10, 11, 12, 13, 14, 15, 23, 24 & 25

Identified Planning Goals:

Wildlife, fisheries along with some timber production is the main uses of this area. The goal is to maintain a healthy, sustainable forest ecosystem with special emphasis on unique forest communities and wildlife habitat.

Soil and topography:

The soil in this compartment is mostly made up of a complex of sandy ridges mixed in with level lowland peat soils. The ridges are subtle and narrow for the most part. The forested cover types in the lowland peat soils are typically marsh or treed bogs. The ridges are typically forested with pine, spruce and aspen with some of the richer upland soils having maple, beech, hemlock and white pine.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

The entire compartment is State owned. The compartment is bordered by State land to the north and to the east. The west boundary is bordered by private corporate land and the south boundary is bordered by private land. There is one isolated '40' of private land on the east boundary of the compartment. Much of this compartment has avoided development due to its remoteness and lowland nature. The land in this compartment is mostly used for hiking, hunting, wildlife viewing, with some fishing and timber production.

Unique Natural Features:

The nature of the wide open marshes and narrow sand ridges within this compartment are unique and natural features to this area. Sleeper Lakes border the northwest corner of the compartment. Murphy Creek and Auger Creek both flow through and out of this compartment area. This is a large area that is for the most part roadless, however evidence of old roads exist and has had little disturbance in the past 40 years. It has avoided development due to its remoteness and lowland nature.

MNFI has identified patterned fens in this compartment as well as a many unique plants. They also list the potential for loon, merlin, eagle, osprey, goshawk, yellow rail, spruce grouse, moose and wolf.

Archeological, Historical, and Cultural Features:

None known at this time.

Special Management Designations or Considerations:

For the most part, this compartment is large area of wetland marshes with narrow sand ridges irregularly scattered throughout. Most of the compartment is remote with very difficult access due to the lowland forest types and lack of roads. Because of this, it is a large block of unbroken land and has avoided development, offering ideal habitat for many wildlife species. While most of the ridges in this compartment were logged once, the feasibility of timber production could be questioned. New road building and winter conditions would be needed to access much of the compartment for timber harvesting. Most ridges contain little timber volume for the effort it that would be needed to get there. These issues should be factored in when making land management decisions for this compartment.

Watershed and Fisheries Considerations:

Fisheries Concerns: Auger Creek north and west of M-123 is a designated trout stream, however Murphy Creek is not. Both of these streams are laden with beaver dams, blocking Brook Trout migration and other spawning fish from the Tahquamenon River. Still, both of these streams will contribute to the value of the Tahquamenon River fishery in providing nursery habitat for forage fish as well as suitable habitat for amphibians.

Wildlife Habitat Considerations:

Compartment 84- This large compartment is located in central Luce county in the Seney Lake Plain Management Area. It is largely comprised of low, wet habitats with jack and red pine ridges and scattered tamarack and swamp conifer stands. Murphy creek runs through the compartment and provides an excellent wildlife travel corridor. Encouraging structural and species diversity in managed stands in any harvest type will benefit wildlife species. Hemlock, large white pine and oak will

be preserved in harvested stands to provide future snags, nesting trees and mast production. Species of special interest potentially using this stand include moose, gray wolf, bear, otter, mink and numerous marsh birds. Featured species include American woodcock, blackburnian warbler, American marten, red crossbill, spruce grouse, wood thrush, ruffed grouse, snowshoe hare and white-tailed deer.

Mineral Resource and Development Concerns and/or Restrictions

Sections 1 - 4, 9 – 15 & 22 – 26, T47N-R10W, Luce County

Surface sediments consist of peat and muck. There is insufficient data to determine the glacial drift thickness. The Ordovician Trenton and Black River formations subcrop below the glacial drift. The Trenton and Black River are quarried for limestone/dolomite in the UP. There are no gravel pits in the area and potential appears to be limited, as the compartment is dominated by wetlands. There is no economic oil and gas production in the UP.

Vehicle Access:

The main access into the east side of this compartment is via the Williams road which leads west off of M-123. The Williams Road basically 'dead-ends' at a private hunting camp on the east edge of the compartment. From that point there is an old logging leading north and then west across a series of ridges which eventually lead to County Road 407. There is another old logging road leading west from this camp that eventually 'dead-ends'. Both of these old logging roads are currently drivable by ORV and have been used/maintained by hunters. The northeastern edge of the compartment can be accessed via the Fossitt Road which leads west off of M-123. This road also 'dead-ends' at the eastern edge of the compartment where it turns into an abandoned logging road that has grown in. All other logging roads have grown in and have become abandoned or non-existent. M-123 offers access on the very southern edge of the compartment. Overall, the compartment is extremely remote and is accessed mainly by foot.

Survey Needs:

None

Recreational Facilities and Opportunities:

Opportunities for hiking, hunting, fishing and wildlife viewing exist throughout the entire compartment.

Fire Protection:

Sleeper lake fire burned most the compartment in 2007. Due to the remote nature of this area, it would be very difficult to suppress a wildfire in this compartment. A special fire management plan should be created and implemented on how to handle wildfires for these areas.

Additional Compartment Information:

None

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**
