

Compartment Review Presentation

Sault Ste. Marie Forest Management Unit

Compartment 45043

Entry Year: 2027

Acreage: 2,851

County: Chippewa

Management Area: Rudyard Silty Lake Plain

Stand Examiner: Louis Radecki

Legal Description:

T45N R1W Sec 4, 8, 9, 16, 17, 18, 19, 20

Identified Planning Goals:

To regenerate mature lowland conifer stands in a sustainable age class distribution regime while enhancing wildlife values. To prescribe treatments conducive to protecting water quality in these lowland areas. To manage red pine stands for optimal growth and yield to a mature stand at Final Harvest. To provide for reasonable public access for multiple use recreation such as hunting, trail riding, camping, and hiking while protecting the natural resources.

Soil and topography:

Markey Kinross-Croswell, and Markey Dawson: deep, level to undulating, poorly and moderately well drained, mucky and sandy soils on outwash plains. Topography is generally flat to rolling with lowland tag alder and conifer swamps to aspen and hardwood knobs.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

Mostly a contiguous block of State land bordering I-75 and other State land. One private parcel within, containing a hunting camp. Land use is ORV and snowmobile trail riding along with hunting, and timber and wildlife management. Surrounding State land is conducive to landscape level management.

Unique Natural Features:

None known at this time.

Archeological, Historical, and Cultural Features:

Special Management Designations or Considerations:

None this YOY.

Watershed and Fisheries Considerations:

This compartment contains portions of the Little Munuscong River, within the St. Marys River watershed. The Munuscong River is an important tributary for walleye spawning. The Little Munuscong River is a designated trout stream just downstream of this compartment, starting in section 23. Prescribed management activities are appropriate for the protection of the Little Munuscong River.

Wildlife Habitat Considerations:

This compartment is located in the Rudyard Silty Lake Plain Management Area where featured wildlife species include blackburnian warbler, American marten, ruffed grouse, sharp-tailed grouse snowshoe hare, and white-tailed deer. It is dominated by lowland types ranging from conifer to bog. Upland areas are mostly in the southern portion and include a range of types including aspen, mixed conifer and deciduous, and red pine. Treatments are planned in a maturing aspen stand, some lowland conifer, and in the red pine plantation stands. The regeneration expected should benefit ruffed grouse, snowshoe hare, and deer. Other stands provide habitat for wildlife including hare, American woodcock, bittern, black bear, bobcat, and a variety of others.

Mineral Resource and Development Concerns and/or Restrictions

Surface sediments consist of peat and muck, lacustrine sand and gravel, and coarse-textured till. There is insufficient data to determine the glacial drift thickness (~50-200+ feet). The Ordovician Trenton and Black River formations and possibly some Collingwood Shale sub crop below the glacial drift. The former two formations are quarried for stone/dolomite. A gravel pit may be located in Section 20, and a large pit is located just over two miles to the west (sections 14-15, possible trespass onto State land). Sand and gravel potential appears to be good. A well was drilled to the east in 1940 to 585 feet in the Precambrian Jacobsville Sandstone. There is no current economic oil and gas potential in the UP. Surface sediments consist of peat and muck and lacustrine (lake) sand and gravel. There is insufficient data to determine the glacial drift thickness. The Ordovician Trenton and Black River Groups sub crop below the glacial drift. These formations are quarried

for stone/dolomite. Pits are located to the south, but potential appears to be limited. A well was drilled in 1940 to 587 feet in the Precambrian Jacobsville Sandstone. There is no current economic oil and gas production in the UP.

Vehicle Access:

Gaines Highway on the south side. Old Mac Trail on the east side. One two track within the compartment to access the southern stands.

Survey Needs:

SEC 16 T45N R1W

Recreational Facilities and Opportunities:

An ORV Trail exists as well as the snowmobile trail on the Old Mac Trail. No facilities. Hunting is a main activity here also.

Fire Protection:

Good access to the north, south and east part of the compartment. Water sources are close by.

Additional Compartment Information:

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**
