**A PARTIAL BIBLIOGRAPHY FOR
THE STURGEON FAMILY ACIPENSERIDAE**

Eric R. Anderson

INTRODUCTION

Sturgeon are large, primitive fishes that mature late, are long-lived, and occur in both freshwater and marine systems throughout the world. The bibliography presented here consists of 288 references divided into systematics and distribution, biology, management, morphology, physiology, and fish health for 23 species of the genera Acipenser, Huso, Pseudoscaphirhynchus, and Scaphirhynchus. In the biology section, references are further subdivided into general biology, reproduction, feeding and locomotion, early life history, and age and growth. In the management section, references are subdivided into fishery history, population dynamics, and cultural practices. Within each section references are arranged in alphabetical order by the author's surname.

SYSTEMATICS AND DISTRIBUTION

- Bailey, R. M., and F. B. Cross. 1954. River sturgeons of the American genus Scaphirhynchus: characters, distribution, and synonymy. Paper of the Michigan Academy of Science, Arts, and Letters 39:169–208.
- Bajkov, A. D. 1955. White sturgeon with seven rows of scutes. California Fish and Game 41:347–348.
- Cooper, E. L. 1957. What kind of sturgeon is it? Wisconsin Conservation Bulletin 22:31.
- Eddy, S. 1945. Paddlefish and sturgeon. Geological relics among Minnesota fishes. The Conservation Volunteer 8:29–32.
- Filippov, G. M. 1976. Some data on the biology of the beluga Huso huso from the south-eastern part of the Caspian Sea. Journal of Ichthyology 16:566–574.
- Fitch, J. E., and S. A. Schultz. 1978. Some rare and unusual occurrences of fishes off California and Baja California. California Fish and Game 64:74–92.
- Forbes, S. A., and R. E. Richardson. 1905. On a new shovelnose sturgeon from the Mississippi River. Illinois State Laboratory of Natural History Bulletin 7:37–44.

ACKNOWLEDGMENTS

This project was supported by funds from the Michigan Living Resources Program and the Michigan Department of Natural Resources, Institute for Fisheries Research.

Funding was also provided by the United States Fish and Wildlife Service (Anadromous Fish Grant Program) under Minnesota Project AFS-07, and the Minnesota Department of Natural Resources, Fish and Wildlife Section.

I would like to thank Dr. W. C. Latta and Dr. J. S. Diana for their guidance. I also extend my sincere thanks to G. M. Zurek and B. A. Lowell for preparing this manuscript.
