

Compartment Review Presentation

Baraga Forest Management Unit

Compartment 11020

Entry Year 2028

Acreage: 3,560

County: Baraga

Management Area: Michigamme Highlands

Stand Examiner: Ryan Mattila

Legal Description:

Covinton Township
T48N, R32W, Sections 9, 10, 15, and 16.
Spurr Township
T48N, R32W, Sections 21, 22, 27, 28, and 34.

Identified Planning Goals:

To maintain a healthy sustainable forest with special consideration to wildlife and fisheries habitat.

Soil and topography:

The upland is rolling to hilly with level swamps between ridges. Upland soils are champion cobbly silt loam, Net silt loam, amasa cobbly silt loam, and Amasa fine silt loam. Wetlands are Carbondale, Tacoosh and Witbeck mucks.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

State land borders parts of the compartment to the east and west. Several small parcels of private ownership within and bordering compartment. Much of the land surrounding the compartment is owned by land management companies with primary goals of timber management.

Unique Natural Features:

Potential for osprey, eagle, great blue heron rookery, red-shouldered hawk, goshawk, moose, and gray wolf. Potential for wood turtle along riparian corridors. Potential for spruce grouse and black-backed woodpecker. Potential for red-disked alpine, frigga fritillary, and freija fritillary.

Archeological, Historical, and Cultural Features:

None

Special Management Designations or Considerations:

BMP guidelines should be followed around the intermittent streams and the Tioga River.

Watershed and Fisheries Considerations:

This compartment contains the Tioga River and Lateral Creek, which are both designated trout streams. The compartment also contains four unnamed designated trout streams, and a few wetland areas. Implement a riparian buffer to the high bank of the valley wall on the unnamed designated trout stream in stand 8. Maintain the riparian buffer to the high bank of the valley wall along Lateral Creek in section 17 and section 20. Maintain the riparian buffer to the high bank of the valley wall along the Tioga River in stand 122, 60, 139, 126, and 92. Maintain the riparian buffers to the high bank of the valley wall along the unnamed designated trout stream in stand 122, 60, 2, and 20. Maintain the current riparian buffers along the wetlands in stand 55, 114, and 129.

Wildlife Habitat Considerations:

This compartment is in the heart of the western Upper Peninsula moose country due the spatial arrangement of lowlands and uplands and the provision of summer and winter thermal cover near aquatic feeding sites. The primary focus of wildlife habitat management in the management area will be to address the habitat requirements identified for the following featured species: American marten, black bear, gray jay, moose and northern goshawk.

Mineral Resource and Development Concerns and/or Restrictions

Surface sediments consist of peat & muck and coarse-textured till. There is insufficient data to determine the glacial drift thickness. The Precambrian Michigamme Formation subcrops below the glacial drift. There is not a current economic use for these rocks. A gravel pit is located in Section 10 and there should be potential on the uplands. Abandoned iron mines are located six miles to the east. This Compartment has not been previously leased for metallic exploration. There is no economic oil and gas production in the UP.

Vehicle Access:

M-38 is a State Highway which passes along the north of compartment. The Nestoria road runs north and south to the east of compartment. Access to the most of the compartment is through a series of logging roads which are not all on state land. The roads are generally poor and stream crossings may need to be upgraded. From the west access is from the King Lake Road.

Survey Needs:

None identified at this time will be addressed as needed in the future.

Recreational Facilities and Opportunities:

Tioga river offer some excellent fishing opportunities. The large expanse of continuous forest offer great hunting opportunities for both large and small game.

Fire Protection:

This compartments mix of interspersed lower wet areas and higher hardwood stands, in most years this mix will hinder fire growth keeping fires in the area small, in dry years these low areas would hinder movement of equipment and complicate fire suppression efforts.

Additional Compartment Information:

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**
