

Compartment Review Presentation

Gaylord Forest Management Unit

Compartment 52009

Entry Year 2026

Acreage: 803

County: Otsego

Management Area: High Sand Plains

Stand Examiner: Derek Nellis

Legal Description:

T29N, R01W, Sec. 19 & 31

Identified Planning Goals:

To provide for the protection, integrated management and responsible use of a healthy, productive, and undiminished forest resource base for the social, recreational, environmental, and economic benefit of the State of Michigan.

Soil and topography:

Dominate soil type is Rubicon-Grayling Sand, except drainage system through Section 19 which is Rifle Peat - Carbondale Muck.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

Compartment is 100% state ownership. Adjacent ownership consists of large hunting clubs on the north branch of the AuSable River and Blue Water Realty Company on the west side of Crapo Lake Road.

Unique Natural Features:

No Unique Natural Features known.

Archeological, Historical, and Cultural Features:

No Archeological, Historical, or Cultural Features known.

Special Management Designations or Considerations:

This compartment is part of the AuSable Outwash Management Area Plan.

Watershed and Fisheries Considerations:

This compartment contains portions of Little Crapo Lake and a tributary to Crapo Creek, and is adjacent to Crapo Lake. Crapo and Little Crapo Lakes have warmwater fish communities of largemouth bass, pumpkinseed sunfish, bluegill, and northern pike. These lakes are drained by Crapo Creek, a tributary to the North Branch Au Sable River. Proposed treatments are appropriate for the protection of these waterbodies, and Fisheries has no concerns at this time.

Wildlife Habitat Considerations:

Treatments in this compartment will maintain age class diversity in aspen and oak while creating early successional habitat benefiting deer, grouse, and woodcock. Clumps of mature oak will be left for mast production. Jack Pine should be managed for the benefit of Kirtland's Warbler in southern half of compartment as in adjacent compartment to east.

Mineral Resource and Development Concerns and/or Restrictions

Surface sediments consist of glacial outwash sand and gravel and postglacial alluvium. The glacial drift thickness varies between 600 and 800 feet. The Mississippian Coldwater Shale subcrops below the glacial drift. The Coldwater does not have an economic use. The nearest gravel pit is located three miles to the north. No known active sand/gravel pits exist in the area. There is good potential for sand & gravel within the compartment on the uplands, but development could be inhibited by oil & gas infrastructure. In addition, demand for aggregate in the area may be low, primarily limited to the need for local road maintenance. All State-owned mineral rights in the compartment are currently leased and held by production for Antrim Shale gas. The Antrim Shale gas play is generally in decline in the northern LP, and the trend toward plugging of wells is expected to increase in the coming years. There is no known potential for metallic minerals in this part of the state

Vehicle Access:

This compartment has good access with Little Crapo Lake Road which is a county good dirt road located in Section 19, and Crapo Lake Road which is a county gravel road in Section 31. There are several gas pipeline roads within the compartment boundaries. There is no need for road closures at this time.

Survey Needs:

None needed at this time.

Recreational Facilities and Opportunities:

There are no designated recreational trails within the compartment boundaries. The closest recreational trail is the Shupac Snowmobile Trail to the east in Section 32. Crapo Lake receives light fishing pressure summer and winter from local residents.

Fire Protection:**Additional Compartment Information:**

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

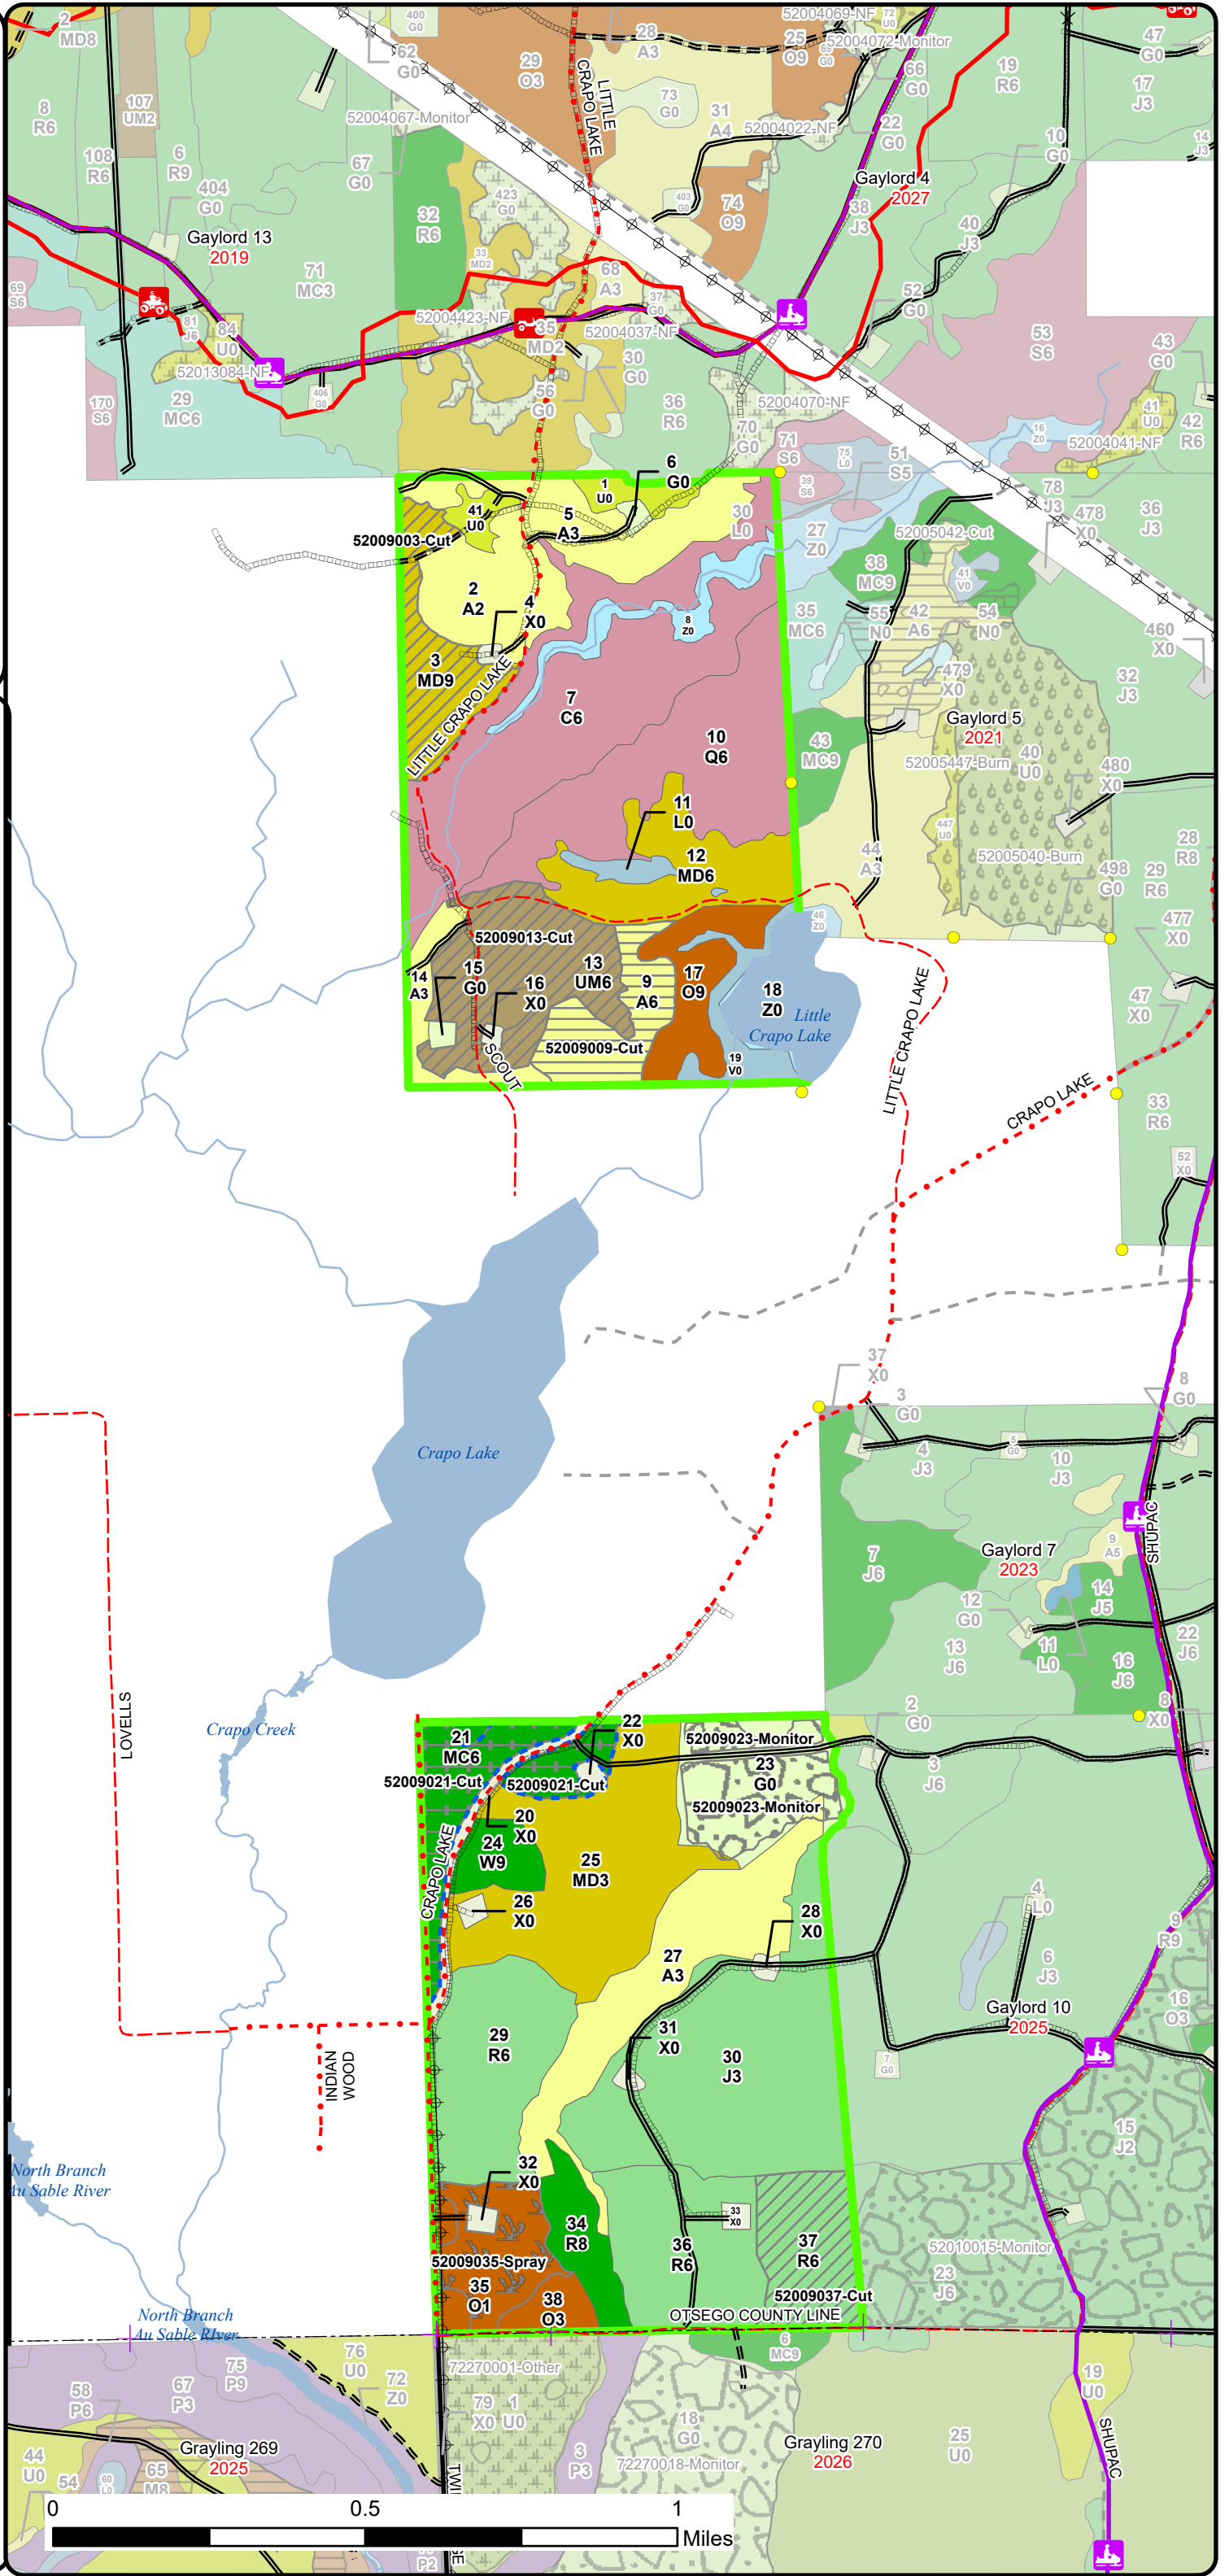

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

Report 5 – PROPOSED SPECIAL CONSERVATION AREA* (SCA) DETAILS

* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
----------	--------------	-------------	----------------	-------

Comments

Report 6 – EXISTING SPECIAL CONSERVATION AREA DETAILS

* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area
 HCVA = High Conservation Value Area
 SCA = Special Conservation Area

Conservation Area	Type	Description
SCA	Research and Military Areas	These areas provide facilities and lands specifically dedicated for research, or other purposes. They include the 5,847 acre Forest Fire Experiment Station, the 12,000 acre Houghton Lake Wildlife Research Area, the Beaver Islands Archipelago Wildlife Research Area (that includes most of Garden Island, all of High and Hog Islands, all state owned land on Beaver, South Fox and North Fox Islands), the Cusino Wildlife Research Area, the 3,000 acre Hunt Creek Fisheries Research Station, the 125 acre Wyman Nursery, and over 144,000 acres of Military Lands.
SCA	Riparian Area	A transitional area between aquatic and terrestrial ecosystems in which the terrestrial ecosystem influences the aquatic ecosystem and vice-versa. Because of the unique conditions adjacent to lakes, streams and open water wetlands, riparian areas harbor a high diversity of plants and wildlife. Riparian communities are ecologically and socially significant in their effects on water quality and quantity, as well as aesthetics, habitat, bank stability, timber production, and their contribution to overall biodiversity.
HCVA	Designated Critical Habitat	Critical habitat areas are established via a consultative and cooperative process between the DNR and the U.S. Fish and Wildlife service for the recovery of threatened and endangered species, as governed by Part 365, Endangered Species Protection, of the Natural Resources and Environmental Protection Act, 1994 PA 451, and the Federal Endangered Species Act of 1973. This is an active program, with proposed species plans in various stages of review. As of now only two exist, Kirtland Warbler Habitat and Piping Plover Habitat.
HCVA	Natural Rivers	There are two Natural Rivers datasets which are derived from spatial buffers set from an established and approved distance from the river centerlines. The Natural Rivers Zoning District is a 400 foot buffer for most Natural Rivers. The Vegetative Buffer ranges from 25 to 100 feet.

Stand	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	Managed Site	General Comments

Red Maple	10	Sapling	1	4																																																														
3	4199 - Other Mixed Upland Deciduous	Sawtimber Well	23.5	92	111-140	N/A	Hybrid Oak sawlog stand of ok quality. Select harvest completed on this stand in 2011 under contract 52-005-06-01. Noted deer feeding activity during winter under oak trees. Selection cut left some old relic red & white pine primarily in NE and along south boundary adjacent to swamp. White pine understory ranges from dense 2'-5' height to 10'-20' saplings. Overall, stand looks good. Minor component of aspen & red maple left.

29	42110 - Planted Red Pine	Poletimber Well	40.5	62	111-140	N/A	Stand 3rd row thinned 09/2017. Red pine plantation which has never had a row thinning to establish skid trails. North half of stand had overtopping oak cut in 1988. Some of the oak stump sprouted back to a height of 20' in the understory. Variable density was noted especially in the north half where oak was previously present. Good quality red pine 4-5 pulp stick average.

37	42110 - Planted Red Pine	Poletimber Well	24.7	75	141-170	N/A	Red pine plantation species thinned in 2001 by removing most of jack pine, pin oak, and aspen. No red pine was cut. Good quality red pine stand with 4-5 pulp sticks average. The sale was prepared in 1996, but it took 5 yrs. to accomplish the harvest. (Sale 52-009-96-01 was Bill Karnes last prepared sale) Species thinning opened up red pine crowns. Ave BA = 122 sq.ft./ac.
