

Compartment Review Presentation

Gaylord Forest Management Unit

Compartment 52160

Entry Year 2026

Acreage: 788

County Cheboygan

Management Area: Presque Isle Lake and Till Plains

Stand Examiner: Donald Stacks

Legal Description:

T36N R02W Sections 5 - 8.

Identified Planning Goals:

To provide for the protection, integrated management and responsible use of a healthy, productive, and undiminished forest resource base for the social, recreational, environmental, and economic benefit of the State of Michigan.

Soil and topography:

Rubicon sand is found on the flat upland areas, with Lupton muck and Tawas peat existing on the lowland areas along Mullet Creek.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

Residential areas can be found on all sides adjacent to the compartment boundary. Several family farms are located nearby.

Unique Natural Features:

Red-shouldered hawk, Cooper's hawk, bald eagle, loon, Woodland vole, Michigan monkey flower, Goblin moonwort, and Limestone oak fern have been recorded in or near Compartment 160. Potential exists for osprey, great blue heron rookery, calypso orchid, and ram's head orchid.

Archeological, Historical, and Cultural Features:

No Archeological, Historical, or Cultural Features known.

Special Management Designations or Considerations:

None.

Watershed and Fisheries Considerations:

This compartment contains a large portion of Mullett Creek, a tributary to Mullett Lake. Mullett Creek is a designated trout stream with a brook trout population. Given beaver activity in the area, early successional species should be discouraged near the stream. A buffer (no clear-cut) should be maintained next to the river.

Wildlife Habitat Considerations:

Treatments in this compartment will maintain age class diversity in both upland and lowland aspen cover types while creating early successional habitat benefitting deer, grouse, and woodcock. Hardwood, Oak and Mixed Conifer are present to a lesser degree and treatments should maintain these cover types for diversity.

Mineral Resource and Development Concerns and/or Restrictions

The closest known active sand/gravel pit is one mile northeast. There is some potential for sand & gravel within the compartment on the uplands, and while there is apparent demand for construction aggregate material in the area, it is not known whether there is sufficient production and reserves from existing operations in the region to meet current demand or if there may be capacity for additional production from new operations. Minimal past exploration and testing for hydrocarbons has occurred in the area and no production. There has been no recent well permit activity or leasing activity involving State-owned mineral rights in the area. There is no known potential for economic production of metallic minerals in this part of the state.

Vehicle Access:

Access to most of the compartment can be gained by several county and forest trail roads.

Survey Needs:

None currently.

Recreational Facilities and Opportunities:

No designated trails exist within, or adjacent to, Compartment 160.

Fire Protection:

Mullet Township VFD is located 3 miles to the south of the compartment. The Indian River Field Office is located 8 miles to the south.

Additional Compartment Information:

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

Proposed Treatments:

25	52160025-CCut	14.6	4130 - Aspen	Poletimber Well	50	81-110	Harvest	Clearcut	413 - Aspen	Even-Aged	No
<p><u>Prescription</u> Cut all trees 2" or larger at DBH, except oak and incidental hemlock and white pine. Do not cut any beech with a band of green paint.</p> <p><u>Specs:</u> Also, do not cut any trees that are 26"+ at DBH. No unharvested retention areas will be left due to the relatively small acreage within the harvest area. Do not cut any trees with a raptor nest, or obvious den trees found within the sale area. Cut and leave intact on the ground any trees banded with pink paint. These trees will serve as ruffed grouse drumming logs. Include the oak wilt spec.</p> <p><u>Next Step</u> Monitoring, Natural Regen (Re-Inventory)</p> <p><u>Treatments:</u></p> <p><u>Acceptable</u> A moderately to fully stocked stand of big-toothed aspen.</p> <p><u>Regen:</u></p> <p><u>Other</u></p> <p><u>Comment:</u></p> <p><u>Site Condition</u></p> <p><u>Proposed Start Date:</u> 10/1 /2025</p>											
27	52160027-CCut	24.4	4139 - Aspen, Mixed Deciduous	Poletimber Well	58	111-140	Harvest	Clearcut	413 - Aspen	Even-Aged	No
<p><u>Prescription</u> Cut all trees 2" or larger at DBH, except incidental white oak, hemlock, and white pine. Mark about a dozen red oak sawtimber trees to leave, spread uniformly throughout the sale area. Do not cut any beech with a band of green paint.</p> <p><u>Specs:</u> Also, do not cut any trees that are 26"+ at DBH. No unharvested retention areas will be left due to the relatively small acreage within the harvest area. Do not cut any trees with a raptor nest, or obvious den trees found within the sale area. Cut and leave intact on the ground any trees banded with pink paint. These trees will serve as ruffed grouse drumming logs. Include the oak wilt spec.</p> <p><u>Next Step</u> Monitoring, Natural Regen (Re-Inventory)</p> <p><u>Treatments:</u></p> <p><u>Acceptable</u> A moderately to fully stocked stand of big-toothed aspen.</p> <p><u>Regen:</u></p> <p><u>Other</u></p> <p><u>Comment:</u></p> <p><u>Site Condition</u></p> <p><u>Proposed Start Date:</u> 10/1 /2025</p>											
33	52160033-OakSelCut	21.9	4123 - Red Oak	Sawtimber Well	95	81-110	Harvest	Group Selection	4123 - Red Oak	Even-Aged	No
<p><u>Prescription</u> Prescribe a group selection harvest to create multiple 100 - 200' canopy gaps in the stand, to encourage red oak regen. Mark red oak to release crop trees to a BA of 70 sq. ft. between the areas of gap creations. Also, harvest all aspen and mixed northern hardwood, except beech marked with green paint, within the stand. Include oak wilt specs. Protect raptor nests and den trees during harvest. After harvest is complete, monitor regen.</p> <p><u>Next Step</u> Monitoring, Natural Regen (Re-Inventory)</p> <p><u>Treatments:</u></p> <p><u>Acceptable</u> A moderately to fully stocked stand of red oak, with lesser amounts of mixed deciduous.</p> <p><u>Regen:</u></p> <p><u>Other</u></p> <p><u>Comment:</u></p> <p><u>Site Condition</u></p> <p><u>Proposed Start Date:</u> 10/1 /2025</p>											

Total Treatment Acreage Proposed: 60.9

Report 5 – PROPOSED SPECIAL CONSERVATION AREA* (SCA) DETAILS

* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
----------	--------------	-------------	----------------	-------

Comments

Report 6 – EXISTING SPECIAL CONSERVATION AREA DETAILS

* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area
 HCVA = High Conservation Value Area
 SCA = Special Conservation Area

Conservation Area	Type	Description
SCA	Cold Water Lake	A coldwater lake has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species to persist from year to year. Suitable conditions for coldwater fishes may occur in Michigan lakes if they are relatively deep, have substantial groundwater inflows, or are located in colder (northern) areas of the state. Such lakes are established by Director's action and designated as trout resources by Fisheries Order 200.
SCA	Cold Water Stream	A coldwater stream has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species (e.g., slimy sculpin) to persist from year to year. Coldwater streams in Michigan typically provide these conditions due to substantial contributions of groundwater to their stream flows. Such streams are established by Director's action and designated as trout resources by Fisheries Order 210.

Stand	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	Managed Site	General Comments																																																		
1	4110 - Sugar Maple Association	Poletimber Well	10.3	80	81-110	N/A	Mixed hardwood, mostly sugar maple poletimber, with lesser amounts of red maple basswood, and beech. Sparse, scattered red oak, big-toothed aspen, hemlock, and white pine also present. A small pocket of variable aged hemlock is coded as long-term retention. Present BA is about 83 sq. ft. Let sugar maple poletimber continue to develop.

6	622 - Lowland Shrub	Nonstocked	8.8		Unspecified	No	Significant cedar windthrow from about 20 years ago. Sparse, scattered saplings consisting of paper birch, balsam fir, black spruce, and cedar. Very wet site.																																																		

Stand	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	Managed Site	General Comments	
7	6120 - Lowland Cedar	Poletimber Well	61.3	110	141-170	N/A	Stand consists of mostly cedar poletimber, but there is a fair amount of cedar sawtimber present also. Lesser amounts of scattered balsam fir and black spruce poletimber, and overmature bigtooth aspen sawtimber. Stand provides good thermal cover for wildlife. Tributaries to Mullet Creek run through this stand. Poorly drained soil, standing water present. Too wet to harvest.

8	6123 - Lowland Fir	Poletimber Well	28.5	70	81-110	N/A	Stand consists of a long, narrow strip of mixed lowland species lying between dense cedar stand to the west and upland aspen to the east. Poorly drained soil, with areas of standing water. Stand also has several small coldwater streams running through it which are tributaries to Mullet Creek. Aspen is overmature and falling out of stand. Stand is too wet to harvest.

12	4112 - Maple, Beech, Cherry Association	Sawtimber Well	18.7	95	51-80	N/A	Small stand of northern hardwood, adjacent to private residence and county road. Consists mostly of sugar maple poletimber and red maple and beech sawtimber. Sparse, scattered red oak, WP, and hemlock present. Present BA averages 72 sq. ft. Beech mortality evident over the last decade. Heavy beech understory. With much of the compartment managed for aspen, leave this stand with a northern hardwood MO. Let sugar maple poletimber continue to develop.

26	42260 - Natural Pine, Mixed Deciduous	Sawtimber Well	12.1	90	81-110	N/A	Stand consists of a mix of white pine, red pine, big-toothed aspen, and red oak. A mix of various size classes make up the white pine, red pine, and red oak. The aspen is mostly in the poletimber size. Present BA averages about 87 sq. ft. A fairly dense understory of white pine exists with sparse scattered hemlock present also. With most of this compartment consisting of various age classes of big-toothed aspen, this stand should be left as it exists, with a pine/hemlock MO, to enhance the diversity of the cover types. Let the white pine understory continue to develop.
