TOWNSHIP 6 SOUTH, RANGE 14 WEST, OF THE MICHIGAN MERIDIAN, MICHIGAN.  
PLAT OF AN ISLAND

The island designated as Tract 27, Township 6 South, Range 14 West, Michigan meridian, hereinafter, on this plat represents land above the ordinary high water mark of Howell Lake.

The description of this island was prepared from U.S. Geological Survey hydrographic and "Soundings, 1882", volume of 1882, and astronomical observations. The same was established with a great accuracy by an authorized man.

Tract 27, County Register District No. 11, is five feet 20 1/2 inches the ordinary high water mark. The soil is all loam, between 1 to 2 1/2 feet. The surface consists of maple, elm, apple, oak, and willow, with a surface 200 ft. 1800 acres.

The ground water level of the lake connects favorably with that of the adjacent member lake; therefore, the ordinary and ordinary water level of the island being with height and width of the ordinary water level in 1877, the year 1877, was submitted into the State. The original survey of 1877 for the purpose of the island in the field was made of the members of Howell Lake.

The island referred to this plat is situated on the lake more than 100 acres, and is situated within the jurisdiction of the State and Federal Act of September 26, 1850 (10 Stat. 437).

Bound, as indicated herein, the platings and areas are as shown on the plat approved December 11, 1900.

This plat was prepared in accordance with Special Instructions for Tract 27, Michigan, dated May 20, 1881, to accommodate the transfer of title under the authority of Section 217 of 22 Stat. 100 U.S.C. (1881) - (see Statutes Michigan State Register 2, 1881).

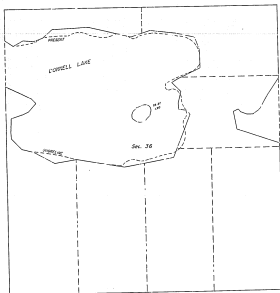

UNITED STATES DEPARTMENT OF THE INTERIOR  
BUREAU OF LAND MANAGEMENT
