P.A. 345 1990, APPROVED BY LIVINGSTON COUNTY MICHIGAN STATE BOARD OF LAND SURVEYORS, JAN. 28, 1971
REVISED MAY 14, 1975
PEER GROUP ON 567 CO. REP 167 CO. REP 178 REVISED JAN. 1983

Surveyor's Michigan License No. 24614

## COHOCTAH J-11

On June 11th, 1823, a wood post denoting this quarter corner was set by Deputy Surveyor Sylvester Sibley. No County Surveyors records could be located pertaining to this point.

In the modern era, a survey by L.W. Munsell in 1967 depicts this corner and references a survey in the NE 1/4 of Section 35 to it, however, the corner material is not identified. Seven years later, Karol R. Piotrowski makes reference to this point as a found 1/2" rerod and provides three witnesses for the rerod that can still be identified at the site. Piotrowski recorded this corner later that year LSC 846.

Charles Garlock utilized this corner on surveys in 1979 and 1980. His identification is the same as that noted by Piotrowski, and he provides three additional witnesses, two of which can still be recovered at the site. Garlock's witnesses were later used in surveys by Boss in 1984.

The most recent survey using this quarter corner was by Mary Barnwell in 1990. Her identification of the corner material is consistent with Piotrowski's 1974 description and two of her witnesses originate with Garlock '79; the third witness was a new one, but was confirmed later that year in a survey by Gary Boss. All three of these witnesses were recovered by CHMP fieldcrews for the writing of this report.

On September 27th, 1994, the fieldcrews recovered this point as a 1/2" iron rod on the centerline of a blacktop road running north/south. The point found appears to fit a wire fence to the east although the for the first two hundred feet or so the fence is not completely straight. To the west is a fenceline and tree row which fit the iron rod found.

The observed position of this corner relative to corner K-11 compared favorably with the corresponding distance noted on surveys by Garlock '87 and Desine Inc. '90. Moreover, its position relative to corner J-13 compared favorably with the same length deduced from various surveys in Section 35 when added together, being specifically, Piotrowski '72 and Miller '72 for length J-13 to J-12, and Garlock '79 and '87, and Boss '84 and '90 for length J-12 to J-11.
