## SUMMARY OF THE LOCATION FOR

CORNER M-6, T.17N., R.18W.,

GLO set this corner in 1837, 2640 feet north of corner M-7 and 2640 feet South of Corner M-5. The Corner was set by Mullet and Brookfield.

Peter Eastman, 1875, (Book 1, Page 25) contracted survey work in both Section 7, T.17N., R.17W., and Section 13, T.17N., R.18W., He could not locate Corner M-5 (corner common to both section 7 and section 13). From his notes he ran the West line of Section 7, South from corner M-3, through corner M-4 and continued on to corner M-6. He then ran West along the South line of Section 7, from corner C-5, through corner B-5 and through M-5 on to L-5 (N ½ corner Section 13, T.17N., R.18W.,) and continued on to corner K-5 (NW corner Section 13). He then stated "set corner M-5 by intersection". At the location for corner M-6, he states on his survey the original witnesses by GLO, except he changed the James Landing La

corner M-6, he states on his survey the original witnesses by GLO, except he changed the do witness to a beech, no change in the diameter, bearings and distances given by GLO.

John A. Mitchell, 1877, (Book I, page 39), contracted survey work in Section 18, T.17N., R.17W. He states on his survey that at the corner M-5 location "established by Eastman", at the corner M-6 location "Old witnesses trees' (I cannot determine if he means the witnesses trees by Eastman or those of GLO). Distance from corner M-5 to corner M-6 differs by 25.04 feet shorter then that of Eastman. He then set the 1/16<sup>th</sup> corners along this line.

C. E. Mitchell, 1911, Mason County Road Commission Records, Contracted with the State to survey the road lying on the common line between section 13, T.17N., R.18W., and Section 18, T.17N., R.17W., . He located corner M-5, M-6 and M-7 when completing this survey. His distance between corner M-5 and M-6 is 10 feet
